QUESTION 1

An administrator is replacing a device on FortiManager by running the following command:

execute device replace sn .

What device name and serial number must the administrator use?

A. Device name and serial number of the original device.

B. Device name and serial number of the replacement device.

C. Device name of the replacement device and serial number of the original device.

D. Device name of the original device and serial number of the replacement device.

Correct Answer: D

QUESTION 2

Refer to the exhibit.

```
FortiManager # diagnose dvm device list
--- There are currently 1 devices/vdoms managed ---

TYPE            OID    SN       HA    IP           NAME            ADOM      IPS               FIRMWARE
fmg/faz enabled 157    FGVM01..  -    10.200.1.1   Local-FortiGate  My_ADOM   14.00641 (regular) 6.0 MR2 (866)
                |- STATUS: dev-db: modified; conf: in sync; cond: pending; dm: retrieved; conn: up

                |- vdom:[3]root flags:0 adom:My_ADOM pkg:[imported]Local-FortiGate
```

Which two statements about the output are true? (Choose two.)

A. The latest revision history for the managed FortiGate does match with the FortiGate running configuration

B. Configuration changes have been installed to FortiGate and represents FortiGate configuration has been changed

C. The latest history for the managed FortiGate does not match with the device-level database

D. Configuration changes directly made on the FortiGate have been automatically updated to device- level database

Correct Answer: AC

STATUS:

dev-db: modified; conf: in sync; cond: pending; dm: retrieved; conn: up -dev-db: modified - This is the

device setting status which indicates that configuration changes were made on FortiManager.

-

conf: in sync - This is the sync status which shows that the latest revision history is in sync with Fortigate\\'s configuration.

-

cond: pending - This is the configuration status which says that configuration changes need to be installed. Most probably a retrieve was done in the past (dm: retrieved) updating the revision history DB (conf:in sync) and FortiManager device level DB, now there is a new modification on FortiManager device level DB (dev-db: modified) which wasn\\'t installed to FortiGate (cond: pending), hence; revision history DB is not aware of that modification and doesn\\'t match device DB.

Conclusion:

Revision DB does match FortiGate.

No changes were installed to FortiGate yet.

Device DB doesn\\'t match Revision DB.

No changes were done on FortiGate (auto-update) but configuration was retrieved instead After an Auto-

Update or Retrieve:

device database = latest revision = FGT

Then after a manual change on FMG end (but no install yet):

latest revision = FGT (still) but now device database has been modified (is different). After reverting to a

previous revision in revision history:

device database = reverted revision != FGT

QUESTION 3

View the following exhibit.

Which of the following statements are true if FortiManager and FortiGate are behind the NAT devices? (Choose two.)

A. FortiGate is discovered by FortiManager through the FortiGate NATed IP address.

B. FortiGate can announce itself to FortiManager only if the FortiManager IP address is configured on FortiGate under

central management.

C. During discovery, the FortiManager NATed IP address is not set by default on FortiGate.

D. If the FCFM tunnel is torn down, FortiManager will try to re-establish the FGFM tunnel.

Correct Answer: AB

QUESTION 4

Which two statements regarding device management on FortiManager are true? (Choose two.)

A. FortiGate devices in HA cluster devices are counted as a single device.

B. FortiGate in transparent mode configurations are not counted toward the device count on FortiManager.

C. FortiGate devices in an HA cluster that has five VDOMs are counted as five separate devices.

D. The maximum number of managed devices for each ADOM is 500.

Correct Answer: AC

QUESTION 5

An administrator would like to create an SD-WAN using central management in the Training ADOM. To create an SD-WAN using central management, which two steps must be completed? (Choose two.)

A. Specify a gateway address when you create a default SD-WAN static route

B. Enable SD-WAN central management in the Training ADOM

C. Configure and install the SD-WAN firewall policy and SD-WAN static route before installing the SDWAN template settings

D. Remove all the interface references such as routes or policies that will be a part of SD-WAN member interfaces

Correct Answer: BD
