QUESTION 1

What causes a host\\'s state to change to "at risk"?

A. The host has been administratively disabled.

B. The logged on user is not found in the Active Directory.

C. The host has failed an endpoint compliance policy or admin scan.

D. The host is not in the Registered Hosts group.

Correct Answer: C

Failure ?Indicates that the host has failed the scan. This option can also be set manually. When the status is set to Failure the host is marked";At Ris"; for the selected scan.

Reference: https://docs.fortinet.com/document/fortinac/8.3.0/administration-guide/241168/host-health-andscanning

QUESTION 2

With enforcement for network access policies and at-risk hosts enabled, what will happen if a host matches a network access policy and has a state of "at risk"?

A. The host is provisioned based on the network access policy.

B. The host is provisioned based on the default access defined by the point of connection.

C. The host is isolated.

D. The host is administratively disabled.

Correct Answer: A

Reference: https://docs.fortinet.com/document/fortinac/8.6.0/administration-guide/49701/policy-assignment

QUESTION 3

Where are logical network values defined?

A. On the profiled devices view

B. In the port properties view of each port

C. In the model configuration view of each infrastructure device

D. In the security and access field of each host record

Correct Answer: D

Reference: https://www.sciencedirect.com/topics/computer-science/logical-network

QUESTION 4

Refer to the exhibit.

General			
User Name	admin	Password	......
Enable Password			

Protocol

Type	SSH 2 ∨

VLAN ID

Default	2	Dead End	112
Registration		Quarantine	111
Authentication		Voice	

CLI Configurations

Type: ⦿ None   ○ Port Based   ○ Host Based

Apply   Reset

If you are forcing the registration of unknown (rogue) hosts, and an unknown (rogue) host connects to a port on the switch, what will occur?

A. No VLAN change is performed.

B. The host is disabled.

C. The host is moved to VLAN 111.

D. The host is moved to a default isolation VLAN.

Correct Answer: B

The ability to limit the number of workstations that can connect to specific ports on the switch is managed with Port Security. If these limits are breached, or access from unknown workstations is attempted, the port can do any or all of the following: drop the untrusted data, notify the network administrator, or disable the port.

QUESTION 5

How should you configure MAC notification traps on a supported switch?

A. Configure them only on ports set as 802.1q trunks

B. Configure them on all ports except uplink ports

C. Configure them on all ports on the switch

D. Configure them only after you configure linkup and linkdown traps

Correct Answer: B

Configure SNMP MAC Notification traps on all access ports (do not include uplinks).
