⚙ **365 Days** Free Update

⚙ **800,000+** Satisfied Customers

QUESTION 1

Which of the following is a requirement to generate analytic reports using on-site FortiPresence deployment?

A. SQL services must be running

B. Two wireless APs must be sending data

C. DTLS encryption on wireless traffic must be turned off

D. Wireless network security must be set to open

Correct Answer: B

FortiPresence VM is deployed locally on your site and consists of two virtual machines. All the analytics data collected and computed resides locally on the VMs.

QUESTION 2

Refer to the exhibit.
If the signal is set to -68 dB on the FortiPlanner site survey reading, which statement is correct regarding the coverage area?

A. Areas with the signal strength equal to -68 dB are zoomed in to provide better visibility

B. Areas with the signal strength weaker than -68 dB are cut out of the map

C. Areas with the signal strength equal or stronger than -68 dB are highlighted in multicolor

D. Areas with the signal strength weaker than -68 dB are highlighted in orange and red to indicate that no signal was propagated by the APs.

Correct Answer: C

QUESTION 3

As a network administrator, you are responsible for managing an enterprise secure wireless LAN. The controller is based in the United States, and you have been asked to deploy a number of managed APs in a remote office in Germany.

What is the correct way to ensure that the RF channels and transmission power limits are appropriately configured for the remote APs?

A. Configure the APs individually by overriding the settings in Managed FortiAPs

B. Configure the controller for the correct country code for Germany

C. Clone a suitable FortiAP profile and change the county code settings on the profile

D. Create a new FortiAP profile and change the county code settings on the profile

Correct Answer: C

QUESTION 4

Which two statements about distributed automatic radio resource provisioning (DARRP) are correct? (Choose two.)

A. DARRP performs continuous spectrum analysis to detect sources of interference. It uses this information to allow the AP to select the optimum channel.

B. DARRP performs measurements of the number of BSSIDs and their signal strength (RSSI). The controller then uses this information to select the optimum channel for the AP.

C. DARRP measurements can be scheduled to occur at specific times.

D. DARRP requires that wireless intrusion detection (WIDS) be enabled to detect neighboring devices.

Correct Answer: AD

DARRP (Distributed Automatic Radio Resource Provisioning) technology ensures the wireless infrastructure is always optimized to deliver maximum performance. Fortinet APs enabled with this advanced feature continuously monitor the RF environment for interference, noise and signals from neighboring APs, enabling the FortiGate WLAN Controller to determine the optimal RF power levels for each AP on the network. When a new AP is provisioned, DARRP also

ensures that it chooses the optimal channel, without administrator intervention.

QUESTION 5

When enabling security fabric on the FortiGate interface to manage FortiAPs, which two types of communication channels are established between FortiGate and FortiAPs? (Choose two.)

A. Control channels

B. Security channels

C. FortLink channels

D. Data channels

Correct Answer: AD

The control channel for managing traffic, which is always encrypted by DTLS. l The data channel for carrying client data packets.
