QUESTION 1

If an end user wants to prevent others from making changes to an object while he is making a change to that same object, what process should he follow?

- A. Download the object from the repository, make necessary changes and then upload the object back into the repository.
- B. Lock the object until changes have been completed.
- C. Set object permission to Exclude until changes have been completed.
- D. Right click on object and select '\\Work Offline\\' option, make necessary changes and then right click and select '\\Resume\\' option.

Correct Answer: B

QUESTION 2

A customer created a parallel CandDS installation on a separate server, using a copy of the production repository database. She can login to the repository, objects are being displayed, but most jobs fail to run and cannot be edited. What could be a likely cause?

- A. During the installation, the customer chose to Discard Existing Data data rather than Preserve Existing Data.
- B. Application server has not been started.
- C. The save/restore process only migrated part of the content repository data.
- D. Additional packages, existing in the production environment, have not been reinstalled after installation of the parallel environment.

Correct Answer: D

QUESTION 3

A customer wants to automate the rerun of a CandDS job each time a Modeler stream in one of the jobsteps is updated. How can this be achieved?

- A. A message-based job schedule can run a job, based on a notification message sent at the update of the Modeler stream.
- B. This can only be achieved through a time based schedule if the Modeler stream is updated at fixed times.
- C. CandDS does not allow this kind of dependency
- D. Define a "loop" connector between the Modeler jobstep and the job.

Correct Answer: A

QUESTION 4

What are the steps to start creating a Time-based schedule in the Content Explorer?

- A. Right-click the job, choose ?Right-click the job, choose new Schedule ? Time Based
- B. Setup a message domain, then right-click the job, choose ?Setup a message domain, then right-click the job, choose new Schedule ? Time Based
- C. Select the jobstep within the job, choose Schedule tab, enter scheduling details
- D. Select the object (e.g. Modeler stream) to be executed by the job, choose File, New, Create Time-Based job schedule

Correct Answer: A

QUESTION 5

Installing a CandDS patch on a standalone CandDS installation fails. What could be a likely cause?

- A. The application server was running during install, while it should have been ended.
- B. The application server was ended during install, while it should have been running.
- C. The client should be updated before the server.
- D. There was no active server license.

Correct Answer: A
