QUESTION 1

Which of the following options best defines the Label-Based Access Control (LBAC) feature?

- A. DB2 LBAC allows you to use labels to reference database objects by a short name instead of the full qualified name.
- B. DB2 LBAC lets you decide exactly who has write/read access to individual rows and columns by comparing the security labels between database objects and users.
- C. DB2 LBAC monitors table data access and tables modifications made by database users.
- D. DB2 LBAC is the DB2 authority in charge of issuing GRANT and REVOKE statements.

Correct Answer: B

QUESTION 2

Consider the scenario where a database administrator is required to restore a database backup for a DB2 pureScale environment. Which of the following statements is correct?

- A. The RESTORE DATABASE command will need to be executed on each DB2 member within the cluster to restore just the database. A separate command will be required to restore the metadata for each member.
- B. The RESTORE DATABASE command will need to be executed on the shared storage to restore the database. The metadata cannot be retrieved until the shared storage is restarted.
- C. The RESTORE DATABASE command will need to be executed on each DB2 caching facility within the cluster to restore just the database. All node metadata is not recoverable since it is not stored within database backups.
- D. The RESTORE DATABASE command will need to be executed on only one of the members within the cluster. This operation will restore both the database and metadata for all members.

Correct Answer: D

QUESTION 3

Which one of the following options is FALSE?

- A. WLM is not supported in DB2 pureScale environments.
- B. HADR with multiple standbys supports reads on all standby databases.
- C. Implementation of a row and column access control policy is transparent to applications accessing the database.
- D. The INGEST utility is capable of transforming and loading data from files and pipes at high speeds into DB2 tables.

Correct Answer: A

QUESTION 4

What is a DB2 instance?

- A. A DB2 instance is just another name for DB2 Database.
- B. A DB2 instance is a copy of a database that can be accessed standalone from the database server.
- C. A DB2 instance is a logical database manager environment where you catalog databases and set configuration parameters.
- D. DB2 does not use instances. It requires only databases to operate.

Correct Answer: C

QUESTION 5

A database administrator executed a `db2iupdt` command in order to drop a cluster caching facility from a DB2 pureScale cluster. Which command can be used to verify that the cluster caching facility is no longer part of the cluster?

- A. `db2instance -display -cluster -modifications`
- B. `db2instance -list -cfs -details`
- C. `db2instance -all -cfs`
- D. `db2instance -list`

Correct Answer: D
