QUESTION 1

Consider the scenario where a database administrator is required to restore a database backup for a DB2 pureScale environment. Which of the following statements is correct?

- A. The RESTORE DATABASE command will need to be executed on each DB2 member within the cluster to restore just the database. A separate command will be required to restore the metadata for each member.
- B. The RESTORE DATABASE command will need to be executed on the shared storage to restore the database. The metadata cannot be retrieved until the shared storage is restarted.
- C. The RESTORE DATABASE command will need to be executed on each DB2 caching facility within the cluster to restore just the database. All node metadata is not recoverable since it is not stored within database backups.
- D. The RESTORE DATABASE command will need to be executed on only one of the members within the cluster. This operation will restore both the database and metadata for all members.

Correct Answer: D

QUESTION 2

Which of the following statements is INCORRECT regarding backup operations in a DB2 pureScale environment?

- A. Only one backup image is produced for the entire cluster.
- B. Issuing a single backup/restore database command on any member initiates a backup or restore operation on behalf of all members.
- C. Database metadata and transaction logs from the members are not included in the backup image.
- D. A backup operation can be performed even if one member is inconsistent.

Correct Answer: C

QUESTION 3

Which one of the following statements is FALSE about DB2 Workload Management (WLM)?

- A. When a WLM threshold condition is violated an action is executed in order to maintain stability in the system.
- B. DB2 Workload Management uses workloads to identify incoming work based on the connection attributes under which the work is submitted.
- C. DB2 Workload Management dispatcher can be used to control sharing of memory resources among active workloads.
- D. DB2 Workload Management allows dynamic re-prioritization of work by remapping a workload to a different service class.

Correct Answer: C

QUESTION 4

A database administrator executed a db2iupdt command in order to drop a cluster caching facility from a DB2 pureScale cluster. Which command can be used to verify that the cluster caching facility is no longer part of the cluster?

- A. db2instance -display -cluster -modifications
- B. db2instance -list -cfs -details
- C. db2instance -all -cfs
- D. db2instance -list

Correct Answer: D

QUESTION 5

What is a table space in DB2?

- A. A table space is an area of main memory that has been allocated by the database manager for the purpose of caching table and index data as it is read from the physical media.
- B. A table space is a DB2 component that manages access to databases.
- C. A table space is a space reserved for catalog tables and base table data.
- D. A table space is a logical storage grouping that can be composed of one or more containers.

Correct Answer: D
