QUESTION 2

Which two statements are correct about App-ID content updates? (Choose two.)

- A. Updated application content may change how security policy rules are enforced
- B. After an application content update, new applications must be manually classified prior to use
- C. Existing security policy rules are not affected by application content updates
- D. After an application content update, new applications are automatically identified and classified

Correct Answer: AD

QUESTION 3

Which plane on a Palo Alto Networks Firewall provides configuration, logging, and reporting functions on a separate processor?

- A. data
- B. network processing
- C. management
- D. security processing

Correct Answer: C

QUESTION 4

What is the function of an application group object?

- A. It contains applications that you want to treat similarly in policy
- B. It groups applications dynamically based on application attributes that you define
- C. It represents specific ports and protocols for an application
- D. It identifies the purpose of a rule or configuration object and helps you better organize your rulebase

Correct Answer: A

QUESTION 5

What are two differences between an application group and an application filter? (Choose two.)

- A. Application groups enable access to sanctioned applications explicitly, while application filters enable access to sanctioned applications implicitly.
- B. Application groups are static, while application filters are dynamic.
- C. Application groups dynamically group applications based on attributes, while application filters contain applications that are statically grouped.
- D. Application groups can be added to application filters, while application filters cannot be added to application groups.

Correct Answer: AB
