QUESTION 1

XYZ Corp users are experiencing delays in the application that you suspect is related to the database.

Which two options do you recommend to isolate the issue? (Choose Two)

- A. Write Pega logs to the database server.
- B. Investigate when the database is used most heavily.
- C. Lower query-time-related alert thresholds.
- D. Increase the threshold for blob-size alerts.

Correct Answer: BC

QUESTION 2

A purchase order application allows users in their work group to read and write purchase request cases. When the total amount exceeds usd10,000 however, only the work group manger can read and write the case. Select two configuration that satisfy the requirement.(choose two)

- A. Add a privilege to the case type class that is conditionally granted when the purchase request amount is less than USD 10.000.
- B. Use a reads access control policy with a condition that verifies the amount is less than USD10.000.
- C. Configure the worklist to only display purchase requests greater than USD10.000 for the work group manager.
- D. Configure conditional access in Access Manager to read and write a purchase request case when the amount is less than USD 10.000.

Correct Answer: CD

QUESTION 3

An end user of the application experienced a browser crash while working on a highly available system. Crash recovery is enabled. Does the user to be reauthenticated?

- A. Yes, if the user is directed to the same node.
- B. No, if the user is directed to a different node.
- C. Yes, If the authentication cookie was lost.
- D. No, if the authentication cookie was lost

Correct Answer: C

QUESTION 4

Table a contains customer information. Table B contains complaints submitted by customers. Table C contains positive feedback submitted by customer.

You are tasked to write a report that list all rows in Table A where, per customer, the number of rows in Table B related to Table A are greater than the number of rows in Table C related to table A.

Which method creates the report that executes with the best performance?

- A. Define two subreports: one that counts rows in Table B relative to Table A, and on that counts the rows in table C relative to Table A. Only include rows in the main. Report against table A where the table B count is greater that the Table C count.
- B. Join table A to Table B and C using include all rows in this class. Count the Join column from both Table B and Table C. Only include rows where the first count is greater than the second.
- C. Join table A to Table B and C using include all rows in join class. Count the Join column from both Table B and Table C. Only include rows where the first count is greater than the second.
- D. Define two subreports, one where table B users '\\\\Do not Join\\\'', and one where Table C users '\\\\Do not Join\\\'', In the main report count the rows from each subpreport, then only include rows where the count from the Table B subreport than the count from the Table C subreport.

Correct Answer: A

QUESTION 5

You isolated the problem to node 1 of the cluster. You see node 1 goes down shortly after 3:00 p.m. every day with an out-of-memory error. Which two alerts typically precede this condition?(choose two)

- A. PEGA0004 ?quantity of data received by database query exceeds limit
- B. PEGA0001 ?HTTP interaction time exceeds limit
- C. PEGA00017 ?Cache exceeds limit
- D. PEGA0002 ?Connect operation time exceeds limit

Correct Answer: BC

Explanation: Six weeks after you deliver your application to production, you users report that the application slows down in the afternoon. The application is almost completely unresponsive for some users shortly after 3:00 P.M. Other users

do not experience this problem until later in the day.

You do not have access to the Production environment, but you do have access to AES. The production environment has three nodes and a load balancer. You need to resolve this issue because a new division of the organization will start

using the application next month.
