QUESTION 1

What two recommendations do you provide to the development team to ensure the performance of the Pega application does not degrade over time? (Choose Two)

- A. Add indexes to all columns.
- B. Purge workparty UUI index tables periodically.
- C. Schedule scripts to maintain frequently fragmented tables.
- D. Purge and/or archive records based on the company's record retention policy.

Correct Answer: CD

QUESTION 2

What two recommendations do you provide to the development team to ensure the performance of the Pega application does not degrade over time? (Choose Two)

- A. Add indexes to all columns.
- B. Purge workparty UUI index tables periodically.
- C. Schedule scripts to maintain frequently fragmented tables.
- D. Purge and/or archive records based on the company's record retention policy.

Correct Answer: CD

QUESTION 3

You imported a rule-admin-product (RAP) file that contains new features into a user acceptance testing(UAT) environment. Select the option that ensures basic functionality behaves as expected before inviting users to start acceptance testing.

- A. Create a smoke test suite. Run the test suite using the pre-import process.
- B. Create an ad hoc test suite. Run the test suite using the post-import process.
- C. Create an integration test suite. Run the test suite using the Execute Test REST service
- D. Create a regression test suite. Run the test suite using the automation server.

Correct Answer: D

QUESTION 4

An end user of the application experienced a browser crash while working on a highly available system. Crash recovery

is enabled. Does the user to be reauthenticated?

- A. Yes, if the user is directed to the same node.
- B. No, if the user is directed to a different node.
- C. Yes, If the authentication cookie was lost.
- D. No, if the authentication cookie was lost

Correct Answer: C

QUESTION 5

How do you begin your research to diagnose the cause of the reported performance issue?

- A. Look at the performance profile and DB Trace out put from each node.
- B. Observe the cluster and node status on the Enterprise Health Console.
- C. Review guardrail warnings in the development environment to determine if any rules with warnings moved to production.
- D. Download the alert log file from each node and analyze the contents in the Pega Log Analyzer.

Correct Answer: B

Explanation: Six weeks after you deliver your application to production, your users report that the application slows down in the afternoon. The application is almost completely unresponsive for some users shortly after

3:00 P.M. Other users do not experience this problem until later in the day.

You do not have access to the Production environment, but you do have access to AES. The production environment has three nodes and a load balancer. You need to resolve this issue because a new division of the organization will start

using the application next month.
