## QUESTION 1

### HOTSPOT

You configure an alert in Power BI.

You need to alert users when the value of a tile exceeds a threshold. To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

#### Answer Area

Where should you configure the Power BI alert so that it triggers the process?

Power BI
Common Data Service
Power Automate
Power BI admin portal

Who can see alerts configured for Power BI?

The person who created the alert.
The dashboard owner and the person who created the alert.
Everyone who has access to the dashboard.
Everyone who has access to the Power BI instance.

Correct Answer:

#### Answer Area

Where should you configure the Power BI alert so that it triggers the process?

Power BI
Common Data Service
Power Automate
Power BI admin portal

Who can see alerts configured for Power BI?

The person who created the alert.
The dashboard owner and the person who created the alert.
Everyone who has access to the dashboard.
Everyone who has access to the Power BI instance.

## QUESTION 2

## DRAG DROP

You are modifying a model-driven app. You set up a customer table in Microsoft Power Platform to retrieve user data. You set up a form with the following columns for users to enter their data. The form includes the following columns:

Column	Data type
Country/region	Choices (multi-select)
Passport ownership	Choice (yes /no)
Passport expiration date	Text

The form must do the following:

The Country/region column must automatically populate with US when English is chosen as a language. If the user selects Other for this column, the column must remain blank so that user can enter a value.

The Passport expiration date column must appear only if the user selects Yes in the Passport ownership column.

You need to configure the app with the least amount of effort.

What should you configure? To answer, drag the appropriate solution component to the correct requirements. Each solution component may be used once, more than once, or not at all. You may need to drag the split bar between panes or

scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

The screenshot shows the 'Requirements' pane on the left and the 'Solution component' pane on the right. The requirements are: 'Country/region' and 'Passport expiration date column appears'. The solution components available are: 'Power Automate flow', 'Business rule', 'Business process flow', and 'Formula'. The 'Business rule' component is currently selected and is being dragged towards the requirements.

Correct Answer:

The screenshot shows the 'Requirements' pane on the left and the 'Solution component' pane on the right. The requirements are: 'Country/region' and 'Passport expiration date column appears'. The solution components available are: 'Power Automate flow', 'Business rule', 'Business process flow', and 'Formula'. The 'Business rule' component is placed next to the 'Country/region' requirement, and the 'Formula' component is placed next to the 'Passport expiration date column appears' requirement.

## QUESTION 3

A company is creating a Power Apps solution for a production facility.

The current solution is in English. The customized components must be translated into several languages.

You need to extract the text for translation.

In which location can you achieve this goal?

- A. The tables in the web application.
- B. The selected environment in the Microsoft Power Platform admin center.
- C. The solution in the web application.
- D. The individual solution components in the web application.

Correct Answer: C

Export the localizable text.

The scope of the localizable text that will be exported is the unmanaged solution that contains the localizable text.

From Power Apps, select Solutions.

In the All Solutions list, select the unmanaged solution that contains the localizable text you want.

On the command bar, select Translations > Export Translations.

---

#### QUESTION 4

A company uses Common Data Service to manage prospects. The company has a business process flow named BPFA that is associated with the Prospect entity to streamline the prospect management process.

You add a field named Category to the Prospect entity. You create additional business process flows. You apply the business process flows to Prospect records based on the selected category. Users can switch to any other newly configured

business process flows but must not use BPFA.

You need to configure the solution.

What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Remove all of the privileges for BPFA.
- B. Use a business rule to prevent users from switching to BPFA.
- C. Deactivate BPFA.
- D. Change the display order of the business process flows to move BPFA to the bottom of the list.

Correct Answer: AC

---

## QUESTION 5

You are creating a Power Virtual Agents chatbot for a Microsoft Power Platform power apps portal app.

The job title of users must be stored automatically when users log in. The job title must always appear in the chatbot.

You need to configure the job title functionality.

Which mechanism should you use?

- A. artificial intelligence
- B. variable
- C. entity
- D. topic

Correct Answer: B

After enabling the Authentication, you will now have access to Two variables, bot.UserDisplayName bot.UserId
