QUESTION 1

The following requirement was included in a business requirements document: "An API shall be built to send data back and forth from the accounting system to the customer relationship system so that name and address data can be synchronized." What should be done with this business requirement?

- A. It should remain because it specifies the reason why the business requirement is needed.
- B. It should be revised because it states a solution to the problem rather than the business need.
- C. It should be removed because it does not state how often the data should be synchronized.
- D. It should remain because it specifies the type of data and the source system.

Correct Answer: D

QUESTION 2

A key component of the business analyst's role during acceptance testing is to:

- A. delegate execution of acceptance testing and defect identification to users.
- B. execute all acceptance tests on behalf of the user community.
- C. act as a resource only when users encounter difficulties while performing tests.
- D. assist the quality assurance department by defining acceptance criteria.

Correct Answer: C

QUESTION 3

Which of the following best describes the function of the requirements baseline?
