-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

What phrase correctly completes the following sentence?

When using WMM Power Save operation, a wireless client device _____.

- A. Alternates between awake and dozing, depending on its need to transmit and receive information
- B. Enters a low-power radio state until it receives a WMM PS-Poll frame from the AP
- C. Experiences higher throughput and lower latency than when operating in Active mode
- D. Powers down a subset of MIMO radio chains and transmits information at a slower data rate
- E. Buffers frames destined to the low-power AP until the AP wakes its radio and begins beaconing again

Correct Answer: A

QUESTION 2

In a long-distance RF link, what statement about Fade Margin is true?

- A. Fade Margin is an additional pad of signal strength designed into the RF system to compensate for unpredictable signal fading.
- B. The Fade Margin of a long-distance radio link should be equivalent to the receiver's antenna gain.
- C. A Fade Margin is unnecessary on a long-distance RF link if more than 80% of the first Fresnel zone is clear of obstructions.
- D. The Fade Margin is a measurement of signal loss through free space, and is a function of frequency and distance.

Correct Answer: A

QUESTION 3

When a client station sends a broadcast probe request frame with a wildcard SSID, how do APs respond?

- A. After waiting a SIFS, all APs reply at the same time with a probe response.
- B. After waiting a SIFS, a designated AP sends an ACK, and then replies with a probe response.
- C. Each AP sends its own ACK, and then follows the ACK with a probe response.
- D. For each probe request frame, only one AP may reply with a probe response.
- E. Each AP responds in turn after preparing a probe response and winning contention.

Correct Answer: E

QUESTION 4

Given: ABC Hospital is planning a Wi-Fi infrastructure upgrade where the 802.11b/g APs would be replaced with new dual-radio HT (802.11n) APs. ABC wants to minimize the time and cost associated with performing a new site survey, so

they will be mounting all of the new APs in the same locations and with the same cable drops as the existing APs.

What is one performance drawback with this deployment method?

- A. Multipath will increase, causing excessive layer-2 retransmissions. The retransmissions will cause latency for VoWiFi handsets.
- B. Increased receiver sensitivity on the HT APs will cause them to continually change channels to avoid co-channel interference.
- C. If the existing UTP cabling is not Category 6 or better, the total Ethernet backhaul for each AP will be limited to 100 Mbps.
- D. In locations with line-of-sight to client devices and little multipath, the benefits of MIMO may be less significant than in other areas.

Correct Answer: D

QUESTION 5

What facts are true regarding controllers and APs in a Split MAC architecture? (Choose 2)

- A. An IP tunnel is established between the AP and controller for AP management and control functions.
- B. Using centralized data forwarding, APs never tag Ethernet frames with VLAN identifiers or 802.1p CoS.
- C. With 802.1X/EAP security, the AP acts as the supplicant and the controller acts as the authenticator.
- D. Management and data frame types must be processed locally by the AP, while control frame types must be sent to the controller.
- E. In a distributed (local bridging) data forwarding model, the AP handles frame encryption and decryption.

Correct Answer: AE
