QUESTION 1

Given: XYZ Company has decided to install an 802.11 WLAN system that will support 1000 wireless users, but they are concerned about network security. XYZ is interested in deploying standardized security features. In addition to WPA2Enterprise with PEAP and role-based access control, XYZ would like to support management frame protection as well as a fast secure roaming protocol for future mobile handsets.

As XYZ Company selects a product to deploy, what two IEEE amendments should be supported to provide the management frame protection and fast secure roaming security features? (Choose two)

- A. 802.11j
- B. 802.11p
- C. 802.11r
- D. 802.11u
- E. 802.11w
- F. 802.11z

Correct Answer: CE

QUESTION 2

In an enterprise WLAN, what condition will prevent a dual-band HT client device from performing a fast and seamless transition (i.e. latency-sensitive applications are not disrupted) between two access points that are managed by the same WLAN controller?

- A. The current AP is using channel 1 and the new AP is using channel 40.
- B. The SSID of the current AP does not match the SSID of the new AP.
- C. The current AP supports only ERP and the new AP is HT capable.
- D. The access points are hiding the SSID in Beacons and Probe Response frames.

Correct Answer: B

QUESTION 3

What specifications should be evaluated for an antenna before it is implemented in a WLAN system? (Choose three)

- A. Spectral efficiency
- B. TPC support
- C. Impedance in Ohms
- D. Elevation Beamwidth

E. Return Loss Rating

F. Operating Frequencies

Correct Answer: CDF

QUESTION 4

What is the purpose of the WLAN component shown in the exhibit?

A. Connecting an unterminated coaxial RF cable to an N-type female connector on an antenna

- B. Adapting an antenna with an SMA connector to an AP with an N-type female connector
- C. Connecting a lightning arrestor (gas discharge tube) to a grounding rod cable
- D. Providing a fixed amount of signal attenuation between a signal source and an SMA antenna connector

Correct Answer: B

QUESTION 5

If an 802.11 RF transmission reaches a receiving antenna simultaneously by direct and indirect (reflected) paths, what effect will the reflected signal have on the signal that took the direct line-of-sight path?

- A. The direct signal will only be received if the reflected signal is more than 180 degrees out of phase.
- B. The direct signal cannot be received if the indirect signal is less than 90 degrees out-of-phase.
- C. The signals will be distorted if the indirect signal arrives simultaneously at the receiver, but 90 degrees out-of-phase.
- D. If the signals are in-phase, they will combine together, cancel one another out, and create a null.

Correct Answer: C
