QUESTION 1

Refer to the exhibit below.

Schema A displayed in the exhibit has been transformed into schema B. How can the before and after schemas be described?

- A. The snowflake schema has been transformed into a de-normalized schema.
- B. The snowflake schema has been transformed into a normalized schema.
- C. The star schema has been transformed into a de-normalized schema.
- D. The star schema has been transformed into a normalized schema.

Correct Answer: A

QUESTION 2

A customer needs multi-language support for a QlikView application. The languages that need to be supported immediately are English, German, and Dutch; in the future, however, additional languages may be needed.

Which solution should a developer use to meet the customer's needs?

- A. a separate document for each language
- B. variables for language-specific items and the option to select a specific language in a field
- C. a language definition table in the data model containing all descriptions for each language, and the option to select a specific language in a field
- D. a language definition table in the data model containing all descriptions for each language, automatically linking the business user to a language

Correct Answer: C

QUESTION 3

A customer's product catalog database contains approximately 50000 individual product SKUs. The catalog is updated quarterly.

The customer needs the load on database servers to be minimized.

Which technique should a developer use to meet the customer's needs?

- A. a preceding load statement when loading the product catalog quarterly from the customer's database
- B. the BUFFER statement when loading the product catalog quarterly from the customer's database
- C. a mapping table when loading the product catalog quarterly from the customer's database
- D. a QVD file to store the product catalog quarterly from the customer's database

Correct Answer: D

QUESTION 4

A developer made several changes to a 25-tab load script that normally runs for at least two hours. Which step should the developer take first to efficiently debug the script logic?

- A. place a Go To Exit statement after each block of revised script code, run the script, and comment each successive Go To Exit after a successful run
- B. move each revised tab in succession to the second tab position, place an Exit script statement at the end of the tab script, and run the script
- C. open the QlikView Debugger and use the step button to execute each line of the script
- D. open the QlikView Debugger and use Limited Load to execute the script

Correct Answer: D

QUESTION 5

A customer's data set contains information for multiple departments. The customer needs a document to show only one specific department when a user first accesses the application.

Which trigger and action will meet the requirement?

- A. trigger. OnPostReload; action. Lock Field
- B. trigger. OnOpen; action. SET Variable
- C. trigger. OnOpen; action. select in Field

D. trigger. Onselect; action. select in Field

Correct Answer: C
