QUESTION 1

You have noticed some unusual behavior in your storage environment. You need to troubleshoot the problem and review the available options there are to resolve the issues and to restore stability. What will restore stability to the environment?

- A. Install system upgrades promptly after successful testing.
- B. Align applications to information policy management requirements.
- C. Limit collaboration with other organizations with similar storage networks and configurations.
- D. An annual security audit should be performed and system logs should be scrutinized for unusual activity.

Correct Answer: A

QUESTION 2

What two (2) technologies are commonly used in a business continuity plan? (Choose two.)

- A. tape backup with restore to a remote site
- B. subsystembased synchronous replication to a remote site
- C. subsystembased asynchronous replication to a remote site
- D. subsystembased replication in the same datacenter
- E. virtual tape library with restore to a remote site

Correct Answer: BC

QUESTION 3

A Fibre Channel switch failed in your fabric and a replacement switch has been delivered. Which two (2) actions should be taken before plugging the replacement switch into the fabric? (Choose two.)

- A. Delete the fabric records of the old switch from the Fabric.
- B. Configure the new switch in to the current zone configuration.
- C. Delete the zone configuration information on the replacement switch.
- D. Set the Domain ID of the replacement switch to the Domain ID of the failed switch.

Correct Answer: CD

QUESTION 4

Two servers have been connected to a SAN with redundant fabrics and the zone configuration needs to be changed. How can you safely change the zone configuration?

- A. Save the current zone configuration to disk, modify it and apply it to both fabrics simultaneously to avoid segmentation.
- B. Modify the zone configuration on one fabric, test it, and then modify the zone configuration on the second fabric.
- C. Modify the zone configuration on one fabric, test it, and then copy the zone configuration to the second fabric.
- D. Modify the zone configuration on both fabrics at the same time, enable them simultaneously to avoid segmentation.

Correct Answer: B

QUESTION 5

Your manager has attended an industry event and calls a meeting to discuss some ideas upon his return. One concept that caught his attention was the use of virtual fabrics. What are two (2) advantages of implementing virtual fabric technology? (Choose two.)

- A. ease of design
- B. isolation of Fault Domains
- C. independent SAN fabric management
- D. universally adopted technology
- E. separate fabric services

Correct Answer: BE
