QUESTION 1

A small business with an IP SAN and NAS storage is experiencing slow response times on the servers which have NAS storage resources.

Which two should the storage administrator monitor to determine the root cause? (Choose two.)

A. Latency per NAS port

B. IOPS per NAS port

C. Link speed per NAS port

D. MBps per NAS port

E. I question the question

Correct Answer: BD

QUESTION 2

Which process allows for the reduction of disk space consumption on a shared storage of OS images used by 200 users?

A. Thin provisioning

B. Deduplication

C. Synchronous replication

D. Defragmentation

Correct Answer: B

QUESTION 3

You receive a ticket from a database group which is complaining about slow access to storage on only one particular server, as compared to other servers in an active-active cluster. You verify zoning and LUN masking which are fine. On the FC switch, you verify link speed, errors, and throughput for the FC switch ports used by this server. There are no errors on the ports and the link speed is the same as on the switch ports used by other servers in the cluster. You notice that on one port on the FC switch used by this server, that there is no throughput at all. What is causing the problem?

A. The switch has obsolete firmware.

B. There are too many ports used on the FC switch.

C. Multipathing was not configured for load-balancing.

D. The switch is over-subscribed.

Correct Answer: C

QUESTION 4

A data center has an existing three tiered storage solution consisting of enterprise, nearline, and tape. Each storage tier has available expansion capacity. A new mission-critical application is being developed that will require 4TBs of extremely low latency enterprise storage. The new application will be hosted on clustered servers. Cost is not a factor.

Which solution will meet the requirements?

A. Add sufficient SSDs to an existing nearline storage system.

B. Add sufficient SSDs to an existing enterprise storage platform.

C. Add sufficient SAS drives to an existing enterprise storage platform.

D. Add sufficient SAS drives to an existing nearline storage system.

Correct Answer: B

QUESTION 5

What should be considered when implementing remote replication of storage?

A. The IOPS requirements at the primary site

B. The geographical location of the primary site

C. The availability of communication links

D. The availability of server hardware at the secondary site

Correct Answer: C
