-  **800,000+** Satisfied Customers

QUESTION 1

The messaging framework established by the application of the Event-Driven Messaging pattern positions a(n) as being responsible for the broadcast of event notification messages.

- A. event management program
- B. synchronous queue
- C. event-driven Web service
- D. database

Correct Answer: A

QUESTION 2

The use of the Intermediate Routing pattern typically results in:

- A. common routing logic being removed from service logic and placed into service agents
- B. common routing logic being removed from service agents and placed into a database
- C. common routing logic being physically centralized into a single service
- D. common routing logic being physically centralized into a single service composition

Correct Answer: A

QUESTION 3

Which of the following statements is false?

- A. The Contract Centralization pattern positions the service contract as the official entry point into the service logic.
- B. The Contract Centralization pattern can impose performance overhead and requires the use of design standards.
- C. The application of the Contract Centralization pattern enables access to underlying service resources through the use of secondary or unofficial technical contracts.
- D. The Decoupled Contract pattern supports the application of the Contract Centralization pattern.

Correct Answer: C

QUESTION 4

The Process Abstraction pattern can help solve which of the following problems?

- A. When business process logic is physically distributed across independent service implementations, it can be difficult

to extend and evolve due to its decentralized nature.

B. The same business rules may exist within different business-centric services, leading to redundancy issues and governance problems due to the challenge of maintaining consistent rule logic within multiple services as rules changes over time.

C. Grouping non-agnostic business logic together with agnostic business logic hinders the governance of the non-agnostic logic and the reuse of the agnostic logic.

D. Bundling both messaging and validation logic into the same service eventually results in the creation of redundant logic across multiple services, thereby causing performance challenges.

Correct Answer: C

QUESTION 5

With the Rules Centralization pattern, business rules are:

A. retrieved and applied at runtime

B. distributed across multiple business-centric services

C. expressed and centralized in policies

D. All of the above

Correct Answer: A
