QUESTION 1

You have an Azure subscription.

You need to implement approval-based, time-bound role activation.

What should you use?

- A. access reviews in Azure AD
- B. Azure AD Privileged Identity Management (PIM)
- C. Azure AD Identity Protection
- D. Conditional access in Azure AD

Correct Answer: B

<https://learn.microsoft.com/en-us/azure/active-directory/privileged-identity-management/pim-configure>

QUESTION 2

You have a Microsoft OneDrive for Business folder that contains the files shown in the following table.

Type	Number of files
.jpg	50
.docx	300
.txt	50
.zip	20

In Microsoft Cloud App Security, you create a file policy to automatically apply a classification. What is the effect of applying the policy?

- A. The policy will apply to only the .docx and .txt files. The policy will classify the files within 24 hours.
- B. The policy will apply to all the files. The policy will classify only 100 files daily.
- C. The policy will apply to only the .docx files. The policy will classify only 100 files daily.
- D. The policy will apply to only the .docx and .txt files. The policy will classify the files immediately.

Correct Answer: C

QUESTION 3

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Windows Hello for Business can use the Microsoft Authenticator app as an authentication method.	<input type="radio"/>	<input type="radio"/>
Windows Hello for Business can use a PIN code as an authentication method.	<input type="radio"/>	<input type="radio"/>
Windows Hello for Business authentication information syncs across all the devices registered by a user.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

Statements	Yes	No
Windows Hello for Business can use the Microsoft Authenticator app as an authentication method.	<input type="radio"/>	<input checked="" type="radio"/>
Windows Hello for Business can use a PIN code as an authentication method.	<input checked="" type="radio"/>	<input type="radio"/>
Windows Hello for Business authentication information syncs across all the devices registered by a user.	<input type="radio"/>	<input checked="" type="radio"/>

Box 1: No

The Microsoft Authenticator app helps you sign in to your accounts when you're using two-factor verification. Two-factor verification helps you to use your accounts more securely because passwords can be forgotten, stolen, or compromised.

Two-factor verification uses a second factor like your phone to make it harder for other people to break in to your account.

Box 2: Yes

In Windows 10, Windows Hello for Business replaces passwords with strong two-factor authentication on devices. This authentication consists of a new type of user credential that is tied to a device and uses a biometric or PIN.

Box 3: No

Windows Hello credentials are based on certificate or asymmetrical key pair. Windows Hello credentials can be bound to the device, and the token that is obtained using the credential is also bound to the device.

QUESTION 4

What is a characteristic of a sensitivity label in Microsoft 365?

- A. encrypted
- B. restricted to predefined categories
- C. persistent

Correct Answer: C

How sensitivity labels work in Power BI

When you apply a sensitivity label to Power BI content and files, it's similar to applying a tag on that resource that has the following benefits:

Customizable - you can create categories for different levels of sensitive content in your organization, such as Personal, Public, General, Confidential, and Highly Confidential.

Clear text - since the label is in clear text, it's easy for users to understand how to treat the content according to sensitivity label guidelines.

Persistent - after a sensitivity label has been applied to content, it accompanies that content when it's exported to Excel, PowerPoint and PDF files, downloaded to .pbix, or saved (in Desktop) and becomes the basis for applying and enforcing

policies.

QUESTION 5

You are creating a custom trainable classifier to identify organizational product codes referenced in Microsoft 365 content.

You identify 300 files to use as seed content.

Where should you store the seed content?

- A. a Microsoft SharePoint Online folder
- B. a Microsoft OneDrive for Business folder
- C. an Azure file share
- D. Microsoft Exchange Online shared mailbox

Correct Answer: A
