QUESTION 1

A device is NOT responding to pings.

What can you determine from this information?

- A. The device may be down.
- B. The device is down.
- C. The device is a firewall.
- D. There is no route to the device.

Correct Answer: A

QUESTION 2

Which traffic type should be allowed through the network in order to leverage SNMP for network monitoring?

- A. UDP traffic on port 53
- B. UDP traffic on port 161
- C. TCP traffic on port 161
- D. TCP traffic on port 162

Correct Answer: B

QUESTION 3

During the process of switch port capacity planning and trending, the Orion NPM reports do not provide sufficient information. What is the easiest way to obtain the appropriate report?

- A. export to a spreadsheet
- B. use Crystal Reports
- C. create a custom view
- D. use Report Writer Advanced SQL

Correct Answer: D

QUESTION 4

Users at a remote site in Paris are complaining that access to the company CRM is slow. Orion is collecting data on this performance, but you need a more real-time perspective on the problem. What should you do?

- A. install an Orion polling engine to collect real-time data at the site in Paris
- B. increase the polling interval in Orion for monitoring of devices in Paris
- C. launch a real-time tool to measure and analyze performance while the problem is occurring
- D. use the Polling Engine Tuner to increase the Max Polls Per Second settings in Orion

Correct Answer: C

QUESTION 5

Users of a remote site are complaining that network performance is intermittently slow. You review the current status of their network with Orion NPM and do not see any issues. What should you do next?

- A. analyze the performance of the remote site over the last 30 days to look for problems
- B. monitor the performance of the remote site for the next 30 days to look for problems
- C. install a protocol analyzer or probe at the remote site to capture detailed performance data
- D. block access from the site to non-business related Internet sites to boost network performance

Correct Answer: A
