QUESTION 3

The Scrum Master is attending a meeting in which the Scrum Team is estimating the effort required to develop the functionality described in each User Story. The team wants to adopt an estimation technique through which they will be able to quickly estimate a large number of User Stories. Which of the following techniques do you think they should adopt?

A. Planning Poker.

B. Wideband Delphi.

C. Affinity Estimation.

D. Relative Sizing.

Correct Answer: C

QUESTION 4

Which one of the following statements about the history of Scrum is NOT correct?

A. The idea of Scrum was derived from a "rugby" approach, in which "a team tries to go the distance as a unit, passing the ball back and forth."

B. Takeuchi and Nonaka proposed that product development should be like a sequential relay race.

C. Scrum was based on a flexible and all-inclusive product development strategy where the development team works as a unit to reach a common goal.

D. Takeuchi and Nonaka based their approach on manufacturing case studies from various industries.

Correct Answer: B

Takeuchi and Nonaka proposed that product development should not be like a sequential relay race, but rather should be analogous to the game of rugby where the team works together, passing the ball back and forth as they move as a unit down the field. The rugby concept of a "Scrum" (where a group of players form together to restart the game) was introduced in this article to describe the authors\\' proposal that product development should involve "moving the Scrum downfield".
