QUESTION 1

Management wishes to add another authentication factor in addition to fingerprints and passwords in order to have three-factor authentication. Which of the following would BEST satisfy this request?

- A. Retinal scan
- B. Passphrase
- C. Token fob
- D. Security question

Correct Answer: C

QUESTION 2

A forensic investigator has run into difficulty recovering usable files from a SAN drive. Which of the following SAN features might have caused the problem?

- A. Storage multipaths
- B. Deduplication
- C. iSCSI initiator encryption
- D. Data snapshots

Correct Answer: B

QUESTION 3

A company has migrated to two-factor authentication for accessing the corporate network, VPN, and SSO. Several legacy applications cannot support multifactor authentication and must continue to use usernames and passwords. Which of the following should be implemented to ensure the legacy applications are as secure as possible while ensuring functionality? (Choose two.)

- A. Priveleged accounts
- B. Password reuse restrictions
- C. Password complexity requirements
- D. Password recovery
- E. Account disablement

Correct Answer: CE

QUESTION 4

A user of the wireless network is unable to gain access to the network. The symptoms are: 1.) Unable to connect to both internal and Internet resources 2.) The wireless icon shows connectivity but has no network access

The wireless network is WPA2 Enterprise and users must be a member of the wireless security group to authenticate. Which of the following is the MOST likely cause of the connectivity issues?

- A. The wireless signal is not strong enough
- B. A remote DDoS attack against the RADIUS server is taking place
- C. The user's laptop only supports WPA and WEP
- D. The DHCP scope is full
- E. The dynamic encryption key did not update while the user was offline

Correct Answer: A

QUESTION 5

Which of the following types of attack is being used when an attacker responds by sending the MAC address of the attacking machine to resolve the MAC to IP address of a valid server?

- A. Session hijacking
- B. IP spoofing
- C. Evil twin
- D. ARP poisoning

Correct Answer: D

An ARP spoofing, also known as ARP poisoning, is a Man in the Middle (MitM) attack that allows attackers to intercept communication between network devices. The attack works as follows: The attacker must have access to the network.
