-  **800,000+** Satisfied Customers

**QUESTION 1**

What set of signals is the vagus nerve responsible for conveying?

- A. signals from the eye
- B. signals from the jaw
- C. balance signals from the inner ear
- D. signals from abdominal organs

Correct Answer: D

---

**QUESTION 2**

Which of these statements regarding isotopes is not true?

- A. Isotopes of an element have the same chemical and physical properties.
- B. Isotopes are atoms of the same element with different mass numbers.
- C. Isotopes have the same number of protons and electrons in each atom, but a different number of neutrons in their nucleus.
- D. Radio-isotopes are isotopes with unstable nuclei that emit radiations.

Correct Answer: A

---

**QUESTION 3**

The rate of a chemical reaction depends on all of the following except \_\_\_\_\_.

- A. amount of mass lost
- B. presence of catalysts
- C. temperature
- D. surface area

Correct Answer: A

The rate at which a chemical reaction occurs does not depend on the amount of mass lost, since the law of conservation of mass (or matter) states that in a chemical reaction there is no loss of mass.

---

**QUESTION 4**

Which of these organs is made up of epithelial tissue?

- A. the skin
- B. the liver
- C. the heart
- D. the brain

Correct Answer: A

---

## QUESTION 5
