QUESTION 1

Which two precautions should a vSphere administrator take before increasing the size of a VMFS datastore? (Choose two.)

- A. Unmount the datastore
- B. Perform a rescan to ensure that all hosts see the most current storage
- C. Quiesce I/O on all disks involved
- D. Shut down all virtual machines stored in the datastore

Correct Answer: BC

QUESTION 2

During a physical network reconfiguration, an ESXi host briefly lost connection to the management network. High Availability (HA) began powering off the virtual machines residing on the affected host to be restarted on an unaffected host in the cluster.

Which setting should the administrator configure to prevent this behavior in the future?

- A. Host isolation response
- B. Host monitoring
- C. VM monitoring
- D. Admission control

Correct Answer: A

QUESTION 3

Which statement is true regarding the licensing of vCenter Server?

- A. The license for vCenter Server must be provided at the time of installation.
- B. Changing the license assigned to vCenter Server requires a restart of the vCenter Server service.
- C. Virtual machines can still be powered on if the vCenter Server license expires.
- D. Licensing for a single vCenter Server installation is determined by the number of managed virtual machines.

Correct Answer: C

QUESTION 4

A vSphere administrator is attempting to migrate a virtual machine, but the progress bar for the migration remains at 10%. Which issue could be preventing the vMotion migration?

- A. A networking problem between the source and destination hosts exists at the physical layer.
- B. The virtual machine is not on shared storage visible to the source and destination hosts.
- C. The vMotion migration priority for this migration was set to High.
- D. The vMotion network is saturated.

Correct Answer: A

QUESTION 5

A DRS cluster has been created with the following specifications:

All mission critical virtual machines are in the root resource pool.

All other virtual machines are placed into two child pools based on medium or low priority.

The two child pools contain adequate resources needed by the medium and low priority virtual machines.

The two child pools are reserving 35% of the total available resources of the cluster.

What is the advantage of leaving the mission critical virtual machines in the root resource pool?

A.

The root resource pool has immediate access to new physical resources added to the cluster.

B.

Virtual machines placed in the root resource pool have a higher vMotion priority in DRS.

C.

Transparent Memory Page Sharing in the root resource pool has a higher weight than in child pools.

D.

Virtual machines placed in the root resource pool have higher default share values.

Correct Answer: A
