QUESTION 1

What happens to the status of users already logged into ESXi Shell when a vSphere administrator enables lockdown mode?

A. Users remain logged in and can run commands, except to disable lockdown mode.

B. Users remain logged in and can run commands, including disabling lockdown mode.

C. Users are immediately logged out of ESXi Shell.

D. Users are logged out after a timeout specified by the vSphere administrator.

Correct Answer: A

QUESTION 2

A vSphere administrator is configuring a fully automated DRS cluster and determines that DRS is not balancing virtual machine workloads. What condition could cause this behavior?

A. vMotion is not properly configured on the hosts in the cluster.

B. HA is not properly configured on the hosts in the cluster.

C. The DRS threshold is configured on the most aggressive setting.

D. Some of the virtual machines have been disabled from DRS.

Correct Answer: A

QUESTION 3

What is the size of a virtual machine .vswp file?

A. The virtual machine .vswp file is equal to twice the amount of available memory configured for the virtual machine when it was created.

B. The virtual machine .vswp file is equal to the amount of virtual memory (virtual machine available memory, plus virtual machine overhead) configured for the virtual machine when it was created.

C. The virtual machine .vswp file is set to the amount of memory allocated minus any memory reservation.

D. The virtual machine .vswp file is equal to the amount of available memory in the ESXi server.

Correct Answer: C

Reference: http://myvirtualcloud.net/?p=2051 (second para)

QUESTION 4

The RDP performance for a virtual machine on an ESXi 5.x host appears to be degraded. What are two possible causes of the problem? (Choose two.)

A. The virtual machine has a high Ready value.

B. The virtual machine\\'s network adaptor is not configured to Connect at power on.

C. The virtual machine\\'s network adaptor is not configured as connected.

D. The virtual machine is on a physical network that has become saturated.

Correct Answer: AD

The virtual had a high ready value and it is on a physical network that has become saturated. That\\'s why the RDP performance becomes degraded.

QUESTION 5

Which settings are required for virtual machine guest tagging for VLAN 100 in a vSphere 5.x environment?

A. Port Group configured for VLAN 100, physical switch configured as a VLAN trunk

B. Port Group configured for VLAN 4095, physical switch configured as a VLAN trunk

C. Port Group configured for VLAN 100, physical switch configured for VLAN 100

D. Port Group configured for VLAN 4095, physical switch configured for VLAN 100

Correct Answer: B

A VLAN ID, which restricts port group traffic to a logical Ethernet segment within the physical network, is optional. For a port group to reach port groups located on other VLANs, the VLAN ID must be set to 4095. If you use VLAN IDs, you must change the port group labels and VLAN IDs together so that the labels properly represent connectivity.

If you enter 0 or leave the option blank, the port group can see only untagged (non-VLAN) traffic. If you enter 4095, the port group can see traffic on any VLAN while leaving the VLAN tags intact.
