QUESTION 1

-- Exhibit -

-- Exhibit -The administrator needs to modify the problematic configuration shown in the exhibit to meet the following requirements:

1. Uplink ports must connect to a 2-port Etherchannel connection. 2. Traffic must pass, even in the event of a port failure. Which two configuration changes should the administrator make? (Choose two.)

A. Change the Load balancing algorithm to Route based on ip hash

B. Change the Load balancing algorithm to Route based on physical NIC load

C. Move Uplink 1 into Active Uplinks and Uplink 2 into Standby Uplinks

D. Move both uplinks into the Active Uplinks

Correct Answer: AD

QUESTION 2

A vSphere administrator needs to use vSphere Update Manager to perform orchestrated upgrades of virtual machines. Which two options are available for virtual machine remediation? (Choose two.)

A. Upgrade virtual machine hardware

B. Upgrade VMware tools

C. Upgrade virtual machine appliances

D. Upgrade virtual machine guest OS

Correct Answer: AB

QUESTION 3

What should an administrator do to identify compliance for virtual machine storage performance?

A. Create a Storage Policy and apply it to the virtual machine

B. Create Storage Capabilities and apply one or more capabilities to the virtual machine

C. Create a Storage Policy and apply it to the datastore containing the virtual machine

D. Create Storage Capabilities and apply one or more capabilities to the datastore containing the virtual machine

Correct Answer: A

QUESTION 4

An administrator needs to configure an alarm that notifies administrators if an application is impacted by overcommitment of memory resources. The environment consists of 100 virtual machines running on 5 ESXi hosts that are configured in a fully automated HA/DRS cluster. The cluster is configured with a parent resource pool and Production and Development child pools.

Where should the administrator set the alarm to meet the requirement?

A. On each virtual machine

B. On each host

C. On the Production resource pool

D. On the cluster

Correct Answer: D

QUESTION 5

An administrator needs to create and provision new virtual machines from a master image that can not be edited or powered on. Which type of resource is most appropriate for the administrator to perform the task?

A. Full Clone

B. Linked Clone

C. Template

D. Snapshot

Correct Answer: C
