QUESTION 1

An administrator is attempting to create an Isolated Organization Network. The following error is returned

when the administrator clicks Finish:

Unable to deploy network NetworkPool2 because the network quota for this Organization VDC has been

reached.

What should the administrator do to resolve the issue?

A. Add an Edge Gateway for the Organization vDC

B. Add a vApp network to the Isolated Organization Network

C. Increase the maximum provisioned networks for the Organization vDC

D. Increase the maximum organization networks for the Organization vDC

Correct Answer: C

QUESTION 2

A virtual machine is receiving a large number of network packets, which is affecting the performance of other virtual machines connected to the same virtual network. What should the vSphere administrator do to resolve the issue?

A. Migrate the virtual machine to a standard switch that has been configured for ingress traffic shaping

B. Configure the distributed switch to which the virtual machine is connected for ingress traffic shaping

C. Migrate the virtual machine to a different port group on the same distributed switch

D. Enable Network I/O Control on the standard switch to which the virtual machine is connected

Correct Answer: B

QUESTION 3

A vApp Author deploys a multi-virtual machine vApp to My Cloud with the startup options defined as follows:

A user powers off the vApp. At what point will VM2 begin powering off?

A. After 10 seconds

B. After 20 seconds

C. After 30 seconds

D. Immediately

Correct Answer: B

QUESTION 4

An administrator needs to create an alarm to monitor when a specific ESXi host in an HA/DRS cluster becomes disconnected from other vSphere components like HA agents or the vCenter Server. Which process must the administrator use to accomplish this?

A. Define a Host type alarm, monitor for the event Cannot connect host, and supply a conditional trigger on Host name equal to a specific label.

B. Define a Cluster type alarm, monitor for the event Cannot connect host, and supply a conditional trigger on Host name equal to a specific label.

C. Define a Cluster type alarm, monitor for the event Host status changed, and supply a specific label for each host.

D. Define a Host type alarm, monitor for the condition Host status changed, and supply a specific label for each host.

Correct Answer: A

QUESTION 5

An organization administrator in the Development organization has been granted rights to a published catalog in the QA organization. No other access has been granted to users in the Development organization. How can the administrator ensure that users in the Development organization have access to an ISO that exists in the QA organization?

A. Copy the ISO to a catalog in the Development organization.

B. Enable Publishing on the QA catalog containing the ISO.

C. Add All Organizations to the QA catalog containing the ISO.

D. Add the Development Organization to the QA catalog containing the ISO.

Correct Answer: A
