QUESTION 1

An administrator needs to store secure tape copies of protected data to an offsite location. How can the administrator automatically eject tape media daily and create detailed reports?

- A. encrypt the tapes using software encryption and use a storage lifecycle policy to perform automatic ejects and create reports
- B. enable the encryption attribute on the vault policy to perform automated ejects and create reports
- C. use tape drives that support hardware encryption and use a vault policy to perform automated ejects and create reports
- D. use tape drives that support hardware encryption and use a storage lifecycle policy to perform automated ejects and create reports

Correct Answer: C

QUESTION 2

What is required to implement Auto Image Replication?

- A. BasicDisk or AdvancedDisk storage units and at least one Master Server
- B. OST-compliant appliances or MSDP and at least one Master Server
- C. OST-compliant appliances or MSDP and at least two Master Servers
- D. BasicDisk or AdvancedDisk storage units and at least two Master Servers

Correct Answer: C

QUESTION 3

A NetBackup environment suffers from intermittent network outages between the MSDP Media Server and clients during the backup window. This results in multiple backup failures.

How should an administrator overcome the backup issues?

- A. enable WAN optimization
- B. enable Network Resiliency
- C. configure client-side deduplication
- D. increase the client connect timeout

Correct Answer: B

QUESTION 4

An administrator wants clients in a remote office to perform client-side deduplication instead of Media Server deduplication.

Where should the administrator set the parameter in the Host Properties to ensure client-side deduplication is performed?

- A. Master Server > Client Attributes > client_hostname > General > Always use client-side deduplication
- B. Clients > General > Always use client-side deduplication
- C. Master Server > Client Attributes > General > Always use client-side deduplication
- D. Clients > Deduplication > Always use client-side deduplication

Correct Answer: A

QUESTION 5

A VMware policy has been configured to back up a Linux virtual machine. Which condition must be met to ensure all data is flushed from memory to disk?

- A. SYMC quiesce utility must be installed
- B. exclude swap and paging files must be unchecked
- C. the virtual machine must be running RedHat Enterprise Linux
- D. VMware Tools services must be stopped

Correct Answer: A
