## QUESTION 1

Which can be added as Backup Repositories? (select three)

- A. Linux Server
- B. SMBv3
- C. Microsoft Windows Server
- D. NFS
- E. CIFS

Correct Answer: ACE

---

## QUESTION 2

Which of these statements regarding Replica failover/failback are true?

- A. After committing failback, the failback protective snapshot that saves the pre-failback state of a VM replica is deleted.
- B. After committing failback, replication activities for the VM which you failed back are NOT resumed automatically.
- C. When you undo failover, the VM replica is reverted to its pre-failover state, powered off and all changes that have taken place since the VM replica was powered on are deleted.
- D. After undoing failover has completed, you will need to reconfigure the replica job before it will start again.
- E. It is only possible to failover one VM at a time.

Correct Answer: BD

---

## QUESTION 3

Is it possible to use Change Block Tracking (CBT) with Hyper-V?

- A. No, for Hyper-V hosts a proprietary filtering mechanism is used.
- B. Yes, but only for gen 2 virtual machines using VHDX.
- C. Yes, Veeam Backup and Replication installs a file system filter driver on every host.
- D. Yes, Hyper-V has built-in Change Block Tracking just like vSphere has.

Correct Answer: C

---

## QUESTION 4

Which statements regarding Guest OS File Recovery are true? (select two)

- A. For FAT, NTFS and ReFS the built-in file-level restore functionality is used.
- B. MultiOS file-level recovery allows reading data from ReiserFS, JFS, JFFS2 and XFS
- C. MultiOS file-level recovery allows reading data from 18 different file systems.
- D. When performing recovery through the FTP server, you can recover files with correct permissions.
- E. When performing recovery directly to a Linux host, you can recover files with correct permissions.

Correct Answer: AD

---

#### QUESTION 5

Which of these statements regarding Application Groups are true? (select two)

- A. Heartbeat/Ping/Script tests can be performed against ANY guest operating system.
- B. The application group creates the "surroundings" for the verified VM(s).
- C. VMs can mixed from both Microsoft Hyper-V and VMware vSphere
- D. VMs added must belong to the same platform (Microsoft Hyper-V or VMware vSphere)
- E. The application group creates the "surroundings" for the verified VM(s). VM(s) inside application group are not tested/verified.

Correct Answer: AB
