QUESTION 3

Your web application uses a simple architecture in which servlets handle requests and then forward to a JSP using a request dispatcher. A. Store the data in a public instance variable in the servlet.

B. Add an attribute to the request object before using the request dispatcher.

C. Add an attribute to the context object before using the request dispatcher.

QUESTION 12

You have a simple web application that has a single Front Controller servlet that dispatches to JSPs to generate a variety of views. Several of these views require further database processing to retrieve the necessary order object using the orderID request parameter. To do this additional processing, you pass the request first to a servlet that is mapped to the URL pattern /WEB-INF/retreiveOrder.do in the deployment descriptor.
