QUESTION 1

Which Vblock® System logs are sent to this server to facilitate reporting alerts and troubleshooting?

- A. syslog server
- B. vCenter server
- C. Unisphere server
- D. SQL server

Correct Answer: D

QUESTION 2

You have a single storage pool that has been dedicated for quality assurance and development purposes. Both groups have submitted requests for LUNs, but the total LUN capacity requested exceeds the total available capacity of the pool by several terabytes.

What would you do to satisfy both groups' requests?

- A. Compress the LUNs.
- B. Split the total pool capacity equally between both groups.
- C. Use thin provisioned LUNs to oversubscribe capacity.
- D. Provide network file space to offset the difference.

Correct Answer: C

QUESTION 3

Which vSphere feature would be used to move a virtual machine's back-end files to a different data store?

- A. DRS
- B. FT
- C. Storage vMotion
- D. HA

Correct Answer: C

QUESTION 4

How do you create a log bundle for the Nexus 1000V virtual switch module (VSM)?

- A. Use the vCenter client to generate a VMware support bundle.
- B. Execute the vem-support all command from the shell on each ESXi host.
- C. Run the show tech-support svcs > bootflash:techsupport.log command from the VSM shell.
- D. Use the Java-based Nexus 1000V log bundle creator on the element manager.

Correct Answer: C

QUESTION 5

What are three supported disk types for a Vblock® System 720? (Choose three)

- A. EFD
- B. FC
- C. SAS
- D. SATA
- E. NL_SAS

Correct Answer: ABD

QUESTION 6

Your company needs to add a new masking view to their Vblock® System 720. Which three grouping constructs must be selected? (Choose three)

- A. Initiator group
- B. Disk group
- C. Storage group
- D. Device group
- E. Port group

Correct Answer: ACE

QUESTION 7

You need to provision a new Cisco UCS blade on your Vblock® System 340 using UCSM. What are two methods to accomplish this task? (Choose two)

- A. The service profile can be provisioned from a template.
- B. The service profile can be provisioned to multiple blades.

- C. The service profile can be cloned from another service profile.
- D. The service profile can be provisioned from a service manager.

Correct Answer: AC

QUESTION 8

Your company wants to know if you are currently having problems with your MDS switches. You want to review for potential problems using VCE Vision™ Intelligent Operations.

Which group would contain this component?

- A. Compute
- B. Storage
- C. Network
- D. Management

Correct Answer: C

QUESTION 9

An application owner complains about poor application performance since the application was moved to the Vblock® System 340. Your VMware administrator determines that the storage used for this application has a very high latency. Which step would you take to gather information from your storage array to send to EMC technical support?

- A. Generate a diagnostic file for each storage processor in Unisphere.
- B. Generate a diagnostic file for each block pool in Unisphere.
- C. Create a support bundle for each RAID group in Unisphere.
- D. Create a support bundle for the FAST cache in Unisphere.

Correct Answer: A

QUESTION 10

You are asked to add a new ESXi host to an existing VMware cluster. You identify an available blade with the same specifications.

Which statement is a VCE recommendation?

- A. Hosts in a VMware cluster should each belong to a different VSAN.
- B. Service profiles in a VMware cluster should be kept on as few chassis as possible.
- C. Service profiles in a VMware cluster should be spread out over as many Vblock® Systems as possible.

D. Hosts in a VMware cluster should always belong to the same service profile template.

Correct Answer: D

QUESTION 11

You have a problem with a Vblock® System 340 VNX array. While talking with support, they request that you generate an SP Collect and send it to them.

How do you collect this data?

- A. Log into USM and send diagnostics data to VCE Vision™ Intelligent Operations.
- B. Log into USM, click on Diagnostics and Capture Diagnostics Data.
- C. Log into USM, generate SP Collect, and get SP Collect for each SP.
- D. Log into USM, Capture Diagnostic Data, and get capture diagnostic data.

Correct Answer: B

QUESTION 12

You want to modify settings in the UCS.

To which IP address should you point your browser?

- A. the IP address of UCS fabric extender B
- B. the IP address of UCS fabric extender A
- C. the IP address of the Vblock® System management switch
- D. the IP address of the UCS Manager Cluster

Correct Answer: D

QUESTION 13

You have added physical disks to your Vblock® System 720 to a physical disk group and then created data devices.

What must you do to see the new capacity?

- A. Add the devices to the masking group.
- B. Map the devices to the front end ports.
- C. Add the devices to the thin pool and enable them.
- D. Add the devices to the FAST VP policy.

Correct Answer: C

QUESTION 14

You are deploying a new business critical application that cannot have any down time. The new business application does not support clustering and you decide to implement VMware Fault Tolerance. Which two configurations must be in place to support the business application? (Choose two)

- A. The virtual machine is configured with 1 vCPU.
- B. The virtual machine is configured with raw device mappings for storage.
- C. The ESXi host is configured with a data store heartbeat for fault tolerance.
- D. The ESXi host is configured with a kernel port for fault tolerance logging.

Correct Answer: AD

QUESTION 15

You are configuring storage groups for new ESXi hosts residing on a Vblock® System 200. A customer has asked for storage separation across virtual machines.

Where should the VMFS configured LUNs reside?

- A. In the same storage group where the boot from the SAN LUN resides
- B. In a single storage group with all the other ESXi hosts
- C. In multiple storage groups configured for each host
- D. In a single storage group configured for the control station

Correct Answer: C
