Which two methods can be used to accomplish this goal? (Select two.)

- A. use the bpexptime command to change the expiration date of the image
- B. use the bpretlevel command to customize the retention level
- C. use the bpimmedia command to freeze the tape
- D. use the bpduplicate command to create a copy with an infinite retention
- E. use the vmchange command to change the expiration date of the tape

Correct Answer: AD

QUESTION 5

Which scenario accurately describes the creation of a full synthetic backup using tape?

- A. a single drive can be used for both the read and write of the backup
- B. a separate read drive and write drive can be used on the same Media Server
- C. a read and write drive can be used on different Media Servers
- D. a disk storage unit must be used prior to copying the backup to tape

Correct Answer: B

QUESTION 6

What is the default length of time that true image restore (TIR) information is retained in the NetBackup catalog?

- A. 1 day
- B. 3 days
- C. 28 days
- D. 30 days

Correct Answer: A

QUESTION 7

Which two conditions must be met to change the volume group of a tape? (Select two.)

- A. backup tapes must be in the same library or standalone

- B. backup tapes must have barcode labels
- C. backup tapes must be unassigned
- D. backup tapes must be vaulted
- E. backup tapes must have the same media type

Correct Answer: AE

QUESTION 8

An administrator needs to store secure tape copies of protected data to an offsite location. How can the administrator automatically eject tape media daily and create detailed reports?

- A. encrypt the tapes using software encryption and use a storage lifecycle policy to perform automatic ejects and create reports
- B. enable the encryption attribute on the vault policy to perform automated ejects and create reports
- C. use tape drives that support hardware encryption and use a vault policy to perform automated ejects and create reports
- D. use tape drives that support hardware encryption and use a storage lifecycle policy to perform automated ejects and create reports

Correct Answer: C

QUESTION 9

What is the image removal behavior for relocated images from a disk staging storage unit when the high water mark is reached during a backup?

- A. NetBackup removes the oldest images until the low water mark is reached.
- B. NetBackup removes images alphabetically until the low water mark is reached.
- C. NetBackup removes the largest images until the low water mark is reached.
- D. NetBackup removes images with the lowest rank data classification until the low water mark is reached.

Correct Answer: A

QUESTION 10
