QUESTION 1

A patch administrator is preparing to deploy new patches. The administrator needs to avoid applying Microsoft updates to the wrong operating systems. How should the administrator deploy the patches?

- A. by creating a Software Update policy to distribute the updates
- B. by configuring the Import Patch Data for Microsoft task and only including applicable updates
- C. by staging the update for each operating system in the test environment
- D. by only applying updates to the Target with applicable computers when creating a Software Update policy

Correct Answer: A

QUESTION 2

Which Altiris Client Management Suite 7.1 / 7.x solution denies the usage of applications on the network?

- A. Software Management Solution
- B. Application Metering Solution
- C. Application Management Solution
- D. Inventory Solution

Correct Answer: D

QUESTION 3

How does the Software Management Framework improve software management?

- A. It allows the creation of a single policy to install a software title and ensures that it remains properly installed.
- B. It allows for comprehensive tracking of software execution statistics.
- C. It allows software titles to be associated to software licenses and purchases.
- D. It allows for a single view of current deployments and cost details based on current installations and purchasing details.

Correct Answer: A

QUESTION 4

A company has an environment where only some computers have the Symantec Workspace Virtualization (SWV) agent installed. When the system administrator distributes an MSI application through a Managed Delivery policy to all company computers and installs the application into a virtual layer, what will happen to computers without the SWV

Agent?

- A. The application installation will fail.
- B. The SWV agent will automatically be installed; then the application will be installed into a virtual layer.
- C. The application will be installed as nonvirtual, but the application will be moved into a virtual layer after the SWV agent is installed.
- D. The application will be installed as nonvirtual.

Correct Answer: D

QUESTION 5

Which component of Altiris Client Management Suite 7.1 / 7.x helps reduce the cost of imaging and managing workstations from a centralized location?

- A. Symantec Workspace Corporate
- B. Ghost Solution Suite
- C. Deployment Solution
- D. Asset Management Solution

Correct Answer: C

QUESTION 6

Which protocol needs to be configured when using Real-Time System Manager to update a user's password?

- A. ASF
- B. WMI
- C. AMT
- D. WS-MAN

Correct Answer: B

QUESTION 7

An administrator created a software resource with a detection rule. What should be used to determine whether this software resides on a managed computer?

- A. Two Pass Inventory policy
- B. Delta File Inventory task

- C. Detailed File Inventory task
- D. Targeted Software Inventory policy

Correct Answer: D

QUESTION 8

A system administrator created a Software Portal entry that allows any user in the company to install a specific program. For licensing purposes, the administrator needs to determine which computers have the software. Which report can be used to track which computers have the software in question?

- A. the Audit Software Search report
- B. the Add or Remove Program Search report
- C. the Software Compliance Summary report
- D. the Installed Software report

Correct Answer: D

QUESTION 9

A system administrator was asked to distribute the pcAnywhere Agent Plug-in on all Windows endpoints across a company. The administrator accepted all defaults in the pcAnywhere Solution settings and enabled the pcAnywhere Agent Plug-in. When the policy distribution was complete, many support calls came in to the help desk reporting the information listed below. - All endpoints that had another manufacturer's remote control software installed were having stability issues. - All endpoints that are behind firewalls and NAT devices were unable to be remote controlled. Which two should the system administrator have done before enabling the default policy? (Select two.)

- A. The default Target in the "pcAnywhere Plug-in for Windows - Install" policy should have been modified to include incompatible software applications.
- B. The "pcAnywhere Settings - Windows" policy settings in the Connection tab should have been configured properly.
- C. The default Target in the "pcAnywhere Plug-in for Windows - Upgrade" policy should have been modified to include incompatible software applications.
- D. The "pcAnywhere Settings" policy settings in the Security tab should have been configured properly.
- E. The default Target in the "pcAnywhere Plug-in for Windows - Install" policy should have been modified to exclude incompatible software applications.

Correct Answer: BE

QUESTION 10

Which prerequisite must be met before implementing Software Management Solution?

- A. The Symantec Installation Manager must be installed on a managed computer.

- B. The Symantec Management Agent must be installed on a managed computer.
- C. The Symantec Management Platform must be installed on a managed computer.
- D. The Software Management Solution must be installed on a managed computer.

Correct Answer: B

QUESTION 11

What are two Software Update Plug-in responsibilities? (Select two.)

- A. gathers an inventory on all installed software and their associated service pack level
- B. sends execution results of all software installed to the Notification Server
- C. gathers specific inventory on supported operating systems, applications, and the associated service pack level
- D. sends execution results of applied software bulletins to the Notification Server
- E. notifies users before a Managed Delivery policy executes

Correct Answer: CD

QUESTION 12

A system administrator is deploying the pcAnywhere plug-in to a managed computer. What must run before the computer is removed from the targeted install policy?

- A. The Targeted Inventory Policy must be sent to the Symantec Management Platform from the managed computer for it to be removed from the pcAnywhere targeted install policy.
- B. An Inventory File Baseline must be sent to the Symantec Management Platform from the managed computer for it to be removed from the pcAnywhere targeted install policy.
- C. The Standard Inventory Policy must be sent to the Symantec Management Platform from the managed computer for it to be removed from the pcAnywhere targeted install policy.
- D. Basic Inventory must be sent to the Symantec Management Platform from the managed computer for it to be removed from the pcAnywhere targeted install policy.

Correct Answer: D

QUESTION 13

A system administrator needs to review the installation status of the agent plug-ins that have been enabled for a specific computer. In which two places will the administrator find this information? (Select two.)

- A. the Policies view on the Symantec Management Console
- B. the Computer view on the Symantec Management Console

- C. the My Portal page on the Symantec Management Console
- D. the Software Delivery tab of the Symantec Management Agent
- E. the Jobs/Tasks tab on the Symantec Management Agent

Correct Answer: BD

QUESTION 14

An administrator is looking at a Patch Management Compliance report listing several computers requiring Microsoft patches. Which two steps are required to update the computers with the required patches? (Select two.)

- A. Import all listed updates into a filter.
- B. Right-click each update and select "Stage".
- C. Create a policy for each listed patch using the wizard.
- D. Right-click each computer and select "Update Computer".
- E. Import all listed computers into a target.

Correct Answer: BC

QUESTION 15

An administrator needs to create an image that can be used for a mass deployment in the company. Which Deployment Solution task should be run before creating the image?

- A. Run SIDGen to prepare the image for deployment
- B. Run Prepare for Image Capture task before cloning
- C. Run Capture Personality task before cloning
- D. Run Deploy Sysprep task before cloning

Correct Answer: B
