QUESTION 1

The System Manager administrator must consider the implications of restoring System Manager Data. Which two restore-from-backup statements are true? (Choose two.)

- A. The restore operation will terminate all SIP sessions, and no SIP services will be available until the operation completes.
- B. The restore operation will take a varying amount of time depending on the amount of data.
- C. The restore operation will be scheduled for a time when the network is not busy.
- D. The restore operation will over-write all System Manager data held in the repository.

Correct Answer: BC

QUESTION 2

From where can a System Manager (SMGR) export of user data be performed?

- A. from an SSH session with the System Platform Dom-0
- B. from an SSH session with the System Manager virtual machine
- C. from an SSH session with the System Platform C-Dom (utilities domain)
- D. from a web client access System Manager web interface User Management

Correct Answer: D

QUESTION 3

What three pieces of information are required to be entered for the Session Manager to be installed and synchronized with System Manager? (Choose three.)

- A. System Manager IP Address
- B. Session Manager Security Module Address
- C. System Manager FQDN
- D. DNS Server Address
- E. Enrollment Password

Correct Answer: ACE

QUESTION 4

What are two reasons for creating a network location? (Choose two.)

- A. Locations are used to implement Call Admission Control.
- B. The location of a caller is used to determine which Session Manager will process the request.
- C. Locations are used to limit the number of users that may register to the session manager specific physical location.
- D. Session Manager uses the termination location of a caller to determine which dial patterns to look at when routing the call.
- E. Session Manager uses the origination location of a caller to determine which dial patterns to look at when routing the call.

Correct Answer: AE

QUESTION 5

An organization is adding four Session Managers installed to its network. The installation scripts for all four session Manager Instances have completed and all services have been started but none have yet been configured with Session Manager. The technician's task is to use System Manager to set up the four Session Managers in an in (n-1)/n redundant arrangement ready for adding users to redundant Session Manager Pairs. Which sequence best describes the tasks that are to be performed?

- A. Ensure that a Location and SIP Domain suitable for each Session Manager is defined. Add each Session Manager as a SIP Entity. Associate each Session Manager SIP Entity with a Session Manager instance. Set up Entity Links between each Session Manager.
- B. Define each Session Manager as a SIP Entity. Establish relationships between them by defining Routing Policies based on their respective locations. Add appropriate Adaptations to each Session Manager.
- C. Define each Session Manager as a SIP Entity by creating Entity Links. Create Communication Profiles for each Session Manager.
- D. Add each Session Manager as Routing Agents. Establish links between them by adding Locations. Mark each Session Manager as being 'active' or 'standby'.

Correct Answer: A

QUESTION 6

```
Watchdog          9/  9 UP
logevent          14/ 14 UP
postgres-db       24/ 24 UP
sm-mgmt           172/172 UP
sipas-MS          115/115 UP
sipas-SD          120/120 UP
sipas-SH          278/278 UP
sipas-LH          0/ 17 DOWN
sipas-CDR         17/ 17 UP
sal-agent         67/ 67 UP
secmod            1/  1 UP
```

Review the output of the command shown in the exhibit. Which command is used to generate these results and what does it tell you?

- A. swversion displays the Session Manager release information.
- B. statapp displays the current status of the Session Manager services.
- C. smconfig displays the network information and status of the Session Manager.
- D. traceSM displays a ladder trace of the SIP requests going in and out of the Session Manager.
- E. initDRS displays the Session Manager node registration and data replication.

Correct Answer: B

QUESTION 7

A System Manager (SMGR) product administrator needs to perform some routine maintenance on an Avaya product in their network. Although they can successfully log in to SMGR, they do not have access to the menu they require in the navigation panel. Which action must be taken?

- A. Make sure that the administrator has been assigned to a suitable group.
- B. Make sure that the administrator is not logged in at a different browser.
- C. Ensure that the administrator's authentication type is set to 'enterprise' so that SMGR can retrieve permissions from the active directory server.
- D. Check that the administrator has been assigned an appropriate role.

Correct Answer: D

QUESTION 8

Which three statements about a user's profile are correct? (Choose three.)

- A. Branch Session Manager (BSM) association is set in the Session Manager Profile under the user's Communication Profile. If a primary Session Manager has been selected then assigning a BSM

mandatory.

- B. Using the Endpoint Profile a user can be assigned a station on a Communication Manager that SMGR knows about.
- C. The difference between the '\\SMGR Login Password\\' and the '\\Shared Communication Profile Password' is that one allows the user to login to the SMGR web interface and the other allows them to authenticate at a device.
- D. A user may be assigned exactly one role. That single role can allow access to multiple resource types.
- E. User identity authentication (password checking) can be achieved by first configuring SMGR to communicate with an LDAP server and then choosing the profile '\\Authentication Type\\' as '\\Enterprise\\'.

Correct Answer: BCE

QUESTION 9

Application definition allows system administrators to define and manage individual applications, each with their own attributes? The definitions allow administrators to add one or such applications to which of the following?

- A. application programs
- B. application data sets
- C. application sequences
- D. application lists

Correct Answer: C

QUESTION 10

Which two statements about Managed Bandwidth are true? (Choose two.)

- A. If the Managed Bandwidth field is blank for a location no Call Admission Control is done for that location.
- B. If the Managed Bandwidth field has a value. Session Manager keeps track of the bandwidth in use based on the calls coming out of and going to that specific location and denies new calls when the bandwidth in use reaches the limit.
- C. If the Managed Bandwidth field is blank for a location, the default Call Admission Control is done for that location. Session Manager keeps track of the bandwidth in use based on the calls coming out of and going to that specific location and denies new calls when the bandwidth in use reaches the limit.
- D. If the Managed Bandwidth field has a value. Session Manager keeps track of the bandwidth in use based on the calls coming out of and going to that specific location and drops old calls when the bandwidth in use reaches the limit.
- E. If the Managed Bandwidth field has a value, Session Manager keeps track of the bandwidth in use based on the calls coming out of and going to that specific location and sends an alarm to an administrator when new calls reach the bandwidth the limit.

Correct Answer: AB

QUESTION 11

```
System Manager:          135.122.76.116

Local Instance Name:    NearEndSM
Local Management Host:  135.122.76.27
Local Asset Host:       135.122.76.28
Local Asset State:      Deny New SIP
Local Management State: Enabled

Other Session Managers:
TrainBSM Management Host: 135.122.76.139
TrainBSM Asset Host:      135.122.76.140
```

Review the output of the command shown in the exhibit. Which command is used to generate these results and what does it tell you?

- A. swversion displays the Session Manager Release information.
- B. statapp displays the current status of the Session Manager services.
- C. initDRS displays the Session Manager Node registration and data replication.
- D. traceSM displays a ladder trace of the SIP requests going in and out of the Session Manager.
- E. smconfig displays the network information and status the Session Manager.

Correct Answer: E

QUESTION 12

SIP Entity Details Commit Cancel

General

* Name:

* FQDN or IP Address:

Type:

Notes:

Location:

Outbound Proxy:

Time Zone:

Credential name:

When defining a SIP Entity of type "Session Manager", what should be placed in the FQDN or IP Address field?

- A. Security Module IP address (eth2)
- B. System Manager IP address (eth0)
- C. Session Manager Management IP address (eth0)
- D. System Platform web console IP address (eth2)

Correct Answer: A

QUESTION 13

What is validated when the Transport Layer Security (TLS) handshake and mutual TLS authentication is performed between the SIP entity and Session Manager?

- A. entity link
- B. entity name
- C. domain
- D. certificate

Correct Answer: D

QUESTION 14

A Configuration Manager instance has been set up by an inexperienced administrator. A SIP entity in the network is failing on a regular basis and Session Manager sometimes does not detect the failure for up to 30minutes. Which two Session Manager Configuration fields could have been set incorrectly? (Choose two)

- A. Proactive cycle time.
- B. Reactive cycle time.
- C. Timer period
- D. Override port and transport with DNS SRV

Correct Answer: AD

QUESTION 15

An IMS type feature server has been installed by another administrator team. They have also configured session manager to route all incoming calls for a user to be routed to the new feature server. It appears from running traces and capturing network traffic that Session does indeed route the User\'s incoming calls to the feature server, but that the feature server does not appear to take any action besides returning the request back to Session Manager. Which field may be incorrectly configured?

- A. Application Handle
- B. Entity Link port
- C. Originating Application Sequence
- D. Terminating Application Sequence

Correct Answer: A
