## QUESTION 1

In creating a customized Steelhead Mobile client MSI package, what is the Group ID (GID) used for?

- A. Organization of groups
- B. Configuring individual Steelhead Mobile client users with different license groups
- C. Configuration of fixed-target rule groups
- D. Configuration of pass-through rule groups
- E. All of the above

Correct Answer: A

---

## QUESTION 2

Which of the following are examples of Networking policies on the CMC appliance? (Select 3)

- A. WCCP
- B. HighSpeed TCP
- C. Routing
- D. Port Labels
- E. HTTP Protocol

Correct Answer: ACD

---

## QUESTION 3

A customer uses a single URL for a service that uses many servers with different certificates. What SSL options should be enabled to enhance performance?

- A. Passive key derivation
- B. SSL proxy support and SNI (Server name indication)
- C. SSL advanced mode
- D. Early start/late finish

Correct Answer: C

---

## QUESTION 4

Which of the following are valid QoS priority queues for Steelhead appliances? (Select 3)

- A. Normal
- B. Medium
- C. Real-time
- D. Low
- E. Critical

Correct Answer: ACD

---

## QUESTION 5

When two or more Steelhead appliances are configured with Connection Forwarding in such environments as WCCP clustering, what feature will allow remaining Steelhead appliances to continue to provide optimization for new connections when one unit fails?

- A. In-Path Neighbor FailureE. Allow
- B. WCCP neighbor active
- C. Minimum cluster count set to 1
- D. Maximum cluster count set to 2
- E. This cannot be done on Steelhead appliances

Correct Answer: A

---

## QUESTION 6

For a new connection, a Load Balancing rule matches but none of the target Steelhead appliances in the rule are available. What will happen to the new connection?

- A. The connection is passed through
- B. The next rule in the list is examined
- C. The Interceptor appliance triggers an alarm
- D. The Interceptor appliance discontinues redirecting any new connections and places this rule in admissions control

Correct Answer: B

---

## QUESTION 7

The Interceptor appliance can be configured to redirect traffic to the Steelhead appliances via what methods?

- A. GRE
- B. L2
- C. ISIS
- D. Multicast
- E. Redirection is automatic and not configurable

Correct Answer: E

---

## QUESTION 8

The SteelCentral Controller for SteelHead Mobile is rebooted or becomes unreachable from the end user mobile client. What happens to their network connections?

- A. The end user's existing and new connections continue to be optimized as per policy.
- B. SSL trusts will fail and SSL will be passed through, all other traffic is unaffected.
- C. The end user's optimized connections continue but new connections are passed through.
- D. The end user's network connections terminate and they must wait for the controller to come back online.
- E. The end user's optimized connections are reset and restart in pass-through mode.

Correct Answer: A

---

## QUESTION 9

Which of the following points on WCCP v2 are correct? (Select 4)

- A. Intercept on outbound interface only
- B. Multicast support
- C. Able to redirect any TCP/UDP traffic
- D. Uses UDP port 2048 for control messages
- E. Multi-router support

Correct Answer: BCDE

---

## QUESTION 10

Where are SDR references maintained on a Steelhead appliance?

- A. Persistent storage

- B. USB keys
- C. Flash storage
- D. RSP partition
- E. Configuration file

Correct Answer: A

---

## QUESTION 11

You are using TCPdumps on the server-side SteelHead to troubleshoot an application connectivity issue.

The following filter is used on the TCPdump:

(host and host ) or (host and host ) or (proto gre

and ((ip[40:4] =

and

ip[44:4] = ) or (ip[40:4] = and ip[44:4] = )) or (port 7850)

What part of the filter captures the traffic which the Interceptor has applied NAT to?

- A. (ip[40:4] = and ip[44:4] = )
- B. (host and host )
- C. (proto gre and ((ip[40:4] = and ip[44:4] = )
- D. (host and host )

Correct Answer: A

---

## QUESTION 12

What is configured in an Endpoint policy? (Choose the best answer)

- A. Redundant Steelhead Mobile Controllers
- B. In-path rules
- C. Group IDs
- D. Port labels

Correct Answer: A

---

## QUESTION 13

-- Exhibit

Reports > Networking > Current Connections

Established	Half-Open	Half-Closed	Passthrough	Forwarded	Total Optimized	Total	Discarded	Denied	Total Rejected
0	0	0	0	0	0	0	0	0	0

Display: 20 100 250 1000 4000 Connections of Type: All

Filter by: Regular Expression Update Display

Type	SourcePort	DestinationPort	Reduction	LAN KB/WAN KB	Data Start Time	Application	Notes
TCP	172.16.11.99:52386	172.16.11.88:443	0% (0%)	0 KB/0 KB	Pre-Existing	N/A	

-- Exhibit -Refer to the exhibit. What does the display represent? (Select 2)

- A. This Steelhead appliance did not intercept the SYN packet for this TCP connection.
- B. This Steelhead appliance did not intercept the SYN+ packet for this TCP connection.
- C. This connection is not being optimized.
- D. This connection will be optimized after the TCP handshake.

Correct Answer: AC

## QUESTION 14

Which of the following custom TACACS+ attribute-value (AV) pairs gives the user guest privileges?

- A. local-user-name=anonymous
- B. local-user-name=guest

C. local-user-name=administrator

D. local-user-name=monitor

E. local-user-name=ghost

Correct Answer: D

---

## QUESTION 15

What is the process for dropping the connection of an individual user that is currently being optimized? As an example, consider an HTTP connection being optimized with a local address of 192.168.5.10 and remote address of 192.168.5.90. (Select 2)

A. From the GUI, under Connections, select the connection and click on the Reset button

B. From the GUI, under Connections, select the connection and click on the Drop button

C. From the CLI: tcp connection send reset local-only local-addr 192.168.5.10:9999 remote-addr 192.168.5.90:80

D. From the CLI: tcp connection send reset remote-only local-addr 192.168.5.10 local-port 7800 remoteaddr 192.168.5.90 remote-port 80

E. From CLI: tcp reset user 192.168.5.10

Correct Answer: AD
