- ⚙ **100% Money Back** Guarantee
- ⚙ **365 Days** Free Update
- ⚙ **800,000+** Satisfied Customers

QUESTION 1

What are appropriate methods for designing high availability and disaster recovery scenarios for the Blue Prism Database? (Choose three.)

- A. SQL Always on Availability Groups
- B. Windows Clustering
- C. Replication
- D. Blue Prism Active Sync
- E. Connect an application server to 2 Database Instances in parallel

Correct Answer: ABC

QUESTION 2

Where can the key used by the Credential Manager be stored?

- A. The key is always stored in the database
- B. The key is always stored within the config file on the Application Server
- C. The key can either be stored in the database, in the config file on the Application Server, or in a separate securable file on the Application Server
- D. The key is hard-coded and stored securely within the Application. It is subjected to obfuscation to ensure it's protection
- E. The key can only be stored in the database or in the config file on the Application Server

Correct Answer: C

QUESTION 3

When is virtualization of a dedicated Interactive Client System most appropriate? (Choose two.)

- A. Interactive Clients should never be virtualized
- B. For Process Development – it helps to ensure the Interactive Client has the same configuration as the virtualized Runtime Resources
- C. Where the developers are geographically separate to the Blue Prism environment
- D. To ensure a high-latency connection between the Interactive Client and the Application Server
- E. Whenever runtime resources are virtualized

Correct Answer: CD

QUESTION 4

Which of the following is TRUE, when referring to establishing a connection between a V6 Application Server and Client? (Choose two.)

- A. One of the WCF connection modes should be used. .NET remoting is provided for legacy support purposes only.
- B. Either WCF or .NET remoting may be selected. It does not matter which is used.
- C. It is important to ensure that all Blue Prism clients are configured to use the same connection mode as the Blue Prism Server that they are expected to connect to
- D. It is important to configure the Blue Prism certificate server prior to establishing a connection from a client

Correct Answer: AD

QUESTION 5

What security is applied to data that is encrypted by Credential Manager when stored?

- A. The credentials are managed by the Windows Credential store and the security applied is proprietary to Microsoft
- B. The credentials are encrypted by the Application Server for storage in the database using either 3DES or AES-256 and a user generated key
- C. The credentials are encrypted by the Application Server for storage in the database using either 3DES or AES-256 and a secure key hardcoded within the application
- D. Credential Management is handled using session variables and security is applied based on the process logic that is defined.

Correct Answer: B

QUESTION 6

Within a PRODUCTION environment, which of the following tasks would an Interactive Client be used for? (Choose four.)

- A. Developing automated processes
- B. Configuring Application models
- C. Creating packages using Release Manager
- D. Importing packages using Release Manager
- E. Assigning Processes to Runtime Resources
- F. Managing Active Queues
- G. Managing Schedules

Correct Answer: BEFG

QUESTION 7

Which of the following statements are true, when considering a remote access technology and strategy for monitoring and operation of the Blue Prism environment? (Choose three.)

- A. RDP is recommended as the default tool for remoting, as it is built into all Windows Operating systems
- B. RDP is not suitable for remoting of production runtime resources, as it is an intrusive technology and may interfere with “in flight” process execution
- C. Consideration should be given to the security of the remoting tool and whether it can be integrated with SSO
- D. Remote Access to runtime resources should be limited to restrict access and visibility to data that may be used within a process

Correct Answer: BCD

QUESTION 8

What must be considered before operating multiple Runtime Resources on a single Windows desktop?

- A. There are no conditions, only one Runtime Resource can be set to listen per Windows session.
- B. Each Runtime Resource must listen on a different port and the processes which run on the device must not impact other processes on the same device.
- C. Each Runtime Resource must listen on the same port and the processes which run on the device must not impact other processes on the same device.
- D. Each Runtime Resource must listen on a different port.

Correct Answer: B

QUESTION 9

What factors should be considered, when designing the virtualization strategy for a Blue Prism environment?

- A. Existing Data Center and Virtualization strategies
- B. Support of the components
- C. Desktop and Application Virtualization Strategies
- D. Availability
- E. All of the above

Correct Answer: E

QUESTION 10

By default, what port does a Runtime Resource listen on?

- A. 8181 – but it is configurable
- B. 8199 – this is fixed and cannot be changed
- C. 443
- D. There is no default

Correct Answer: A
