QUESTION 1

Which of the following are suggested when you type in a query on Analytics QandA? (Choose three.)

- A. Recent searches
- B. Tables and columns
- C. Breakdowns
- D. Indicators

Correct Answer: ABD

When you use Analytics QandA, the suggestions from previous searches are now shown together with the suggested indicators, tables, and columns. As you type in a query, Analytics QandA suggests recent searches, indicators, tables, and

columns that match what you have typed so far. Only the tables and columns to which you have access are shown.

If Analytics QandA cannot determine which table you want, it shows you up to three likely tables.

QUESTION 2

What is an easy way for a responsible user to get real-time updates on the signals for a particular KPI?

- A. Monitoring the signal score on a dashboard
- B. Receive email notifications
- C. Schedule a report for the signal data
- D. D.Manually check the KPI doe signals

Correct Answer: B

As a responsible user, you can receive email notifications about new or unresolved signals, anti-signals, or any actions taken on signals.

You can configure how frequently you get these reminders and the maximum number of reminders to get for a signal.

You no longer have to open KPI Signals and manually check each KPI for signals. Scheduling a report for the signal data does not provide real-time updates. Manually check the KPI for signals and monitoring the signal score on a dashboard

requires the user to constantly check for the updates without a pause, which is not easy.

QUESTION 3

Which of the following visualisation types allow you to add multiple data sources of the same type in the UI Builder? (Choose two.)

- A. Single Score
- B. Time Series
- C. Pie and donuts
- D. Bars

Correct Answer: BC

You can add multiple data sources of the same type for time series (including Area, Column, Line, Stepline, and Spline) and bar (including Horizontal bar and Vertical bar) visualisations.

QUESTION 4

What 'related lists' are available on the formula indicator form? (Choose three.)

- A. Targets
- B. Contributing Indicators
- C. Breakdowns
- D. Signals

Correct Answer: ABC

Here are the available related lists on the baseline configuration when navigating to the Formula Indicators form: Breakdowns, Contributing Indicators, Time series exclusions, Targets, Thresholds, and Diagnostic Results.

'Signals' is not an out-of-the-box related list on the Formula Indicators form. Use the Contributing indicators related list to navigate to the indicators used in the formula or their indicator sources. If you include another formula indicator in the formula, both that indicator and its contributing indicators are listed.

QUESTION 5

Which of the following can be used across all the visualisations in a workspace?

- A. Signal

B. Dashboard Builder

C. Studio

D. User Experience filter

Correct Answer: D

Create a single User Experience filter for use across all the visualisations in a workspace. The filter you create is available in the workspace in which you created it. For filters to work in workspaces, you must configure an event handler to apply the filters.
