QUESTION 1

A key factor associated with the recently increased incidence of tuberculosis is which of the following?

- A. Increased number of smokers
- B. Increased crowding in urban areas
- C. More thorough screening of the population
- D. Reduced immunity in the Human Immunodeficiency Virus (HIV)-positive population

Correct Answer: A

QUESTION 2

Reprocessed dialyzers may be disinfected in many ways, including chemical disinfection, heat disinfection, and others. When preparing dialyzers for patient use, which of the following is the proper procedure?

- A. Always follow procedures specific to disinfectant type
- B. Always fill the blood compartment before the dialysate compartment
- C. Always fill the dialysate compartment before the blood compartment
- D. Recirculate saline in the extracorporeal circuit before infusing it into the patient

Correct Answer: D

QUESTION 3

If several patients developed pyrogenic reactions during the past week while on dialysis, the nurse should check the water for

- A. yeasts.
- B. fungi.
- C. gram-positive bacteria.
- D. gram-negative bacteria.

Correct Answer: D

QUESTION 4

The total pressure in the blood circuit is a result of all of the following EXCEPT the

- A. rate of dialysis fluid flow.

- B. diameters of the fistula needles.
- C. resistance to flow in the blood circuit.
- D. blood flow rate controlled by the blood pump.

Correct Answer: A

QUESTION 5

Which of the following is the MOST likely cause when a patient develops a fever after hemodialysis treatment has begun?

- A. Hypotension
- B. Hyperkalemia
- C. Pyrogenic reaction
- D. Disequilibrium syndrome

Correct Answer: C

QUESTION 6

All of the following statements about hepatitis B vaccine are correct EXCEPT

- A. the vaccine provides immunity for years following effective vaccination.
- B. the most commonly reported side effects of the vaccine have been localized pain.
- C. the vaccine provides passive hepatitis B immunity.
- D. three doses of the vaccine are required for immunization.

Correct Answer: A

QUESTION 7

A permanent tunneled catheter is an example of

- A. homografts.
- B. internal grafts.
- C. internal fistulas.
- D. external blood accesses.

Correct Answer: D

QUESTION 8

The BEST way to establish hemostasis after dialysis is to apply

- A. a pressure dressing for 30 minutes.
- B. enough pressure to occlude the vessel.
- C. moderate pressure over the puncture site.
- D. firm pressure proximal to the puncture site.

Correct Answer: C

QUESTION 9

With regard to the evaluation of a new piece of dialysis equipment, the LEAST helpful resource is the

- A. Food and Drug Administration (FDA) Good Manufacturing Practices Act.
- B. hospital's biomedical department.
- C. unit's technical support group.
- D. manufacturer of the equipment.

Correct Answer: B

QUESTION 10

A patient's immune system should normally provide protection from which of the following?

- A. Injury
- B. Uremia
- C. Infection
- D. Contamination

Correct Answer: C

QUESTION 11

A reason dialysis patients are likely to develop infections is because they

- A. receive frequent invasive procedures.
- B. receive immunosuppressive therapies.

C. are acutely sensitive to allergies.

D. are on restricted diets.

Correct Answer: A

QUESTION 12

During a high-temperature alarm, which of the following should occur when the audible alarm sounds and the visual alarm is triggered?

A. The dialyzer is bypassed.

B. The venous line clamps.

C. The heparin pump stops.

D. The blood pump stops.

Correct Answer: A

QUESTION 13

In the selection and placement of water treatment components for a home hemodialysis installation, a water softener is undesirable as the final purification method because softened water is high in bacterial count and

A. sodium.

B. resistivity.

C. magnesium.

D. iron.

Correct Answer: A

QUESTION 14

At the initiation of dialysis, the patient complains of pain and burning at the access area. The technician should immediately

A. turn the blood flow down and notify the team leader.

B. turn the blood flow down and administer normal saline (NS).

C. stop the blood flow and hand crank to return the blood.

D. stop the blood flow and do not return the blood.

Correct Answer: D

QUESTION 15

During machine setup, the dialyzer test for residual sterilant is positive. The technician's MOST appropriate response is to

- A. initiate dialysis, because reprocessed dialyzers usually contain sterilant.
- B. discard the entire circuit and replace it with a dry dialyzer.
- C. continue rinsing for five minutes and then retest.
- D. turn up dialysate flow and then retest.

Correct Answer: C
