QUESTION 1

What EAP method is supported on most operating systems without additional installation requirements?

- A. EAP-GTC
- B. EAP-FAST
- C. EAP-TLS
- D. LEAP

Correct Answer: B

QUESTION 2

When configuring a standalone AP with a web-based interface, what should be changed to protect the HTTP interface used to manage the AP?

- A. Admin account password
- B. WPA2 passphrase
- C. SSID
- D. WPA passphrase

Correct Answer: A

QUESTION 3

When clients are using unacceptably low data rates for WLAN transmissions, what metric is too low?

- A. SNR
- B. Interference strength
- C. Noise floor strength
- D. MTU size

Correct Answer: A

QUESTION 4

You are receiving reports from several users that their clients connect with very low data rates. All reports are confined to a particular area in the facility and the users report that the problem does not occur with the same devices in other areas. What is most likely problem in that area?

- A. High SNR
- B. Improper AP security configuration
- C. Poor signal strength
- D. Improper client security configuration

Correct Answer: C

QUESTION 5

You have recently changed the passphrase used with WPA2 in several APs and have reconfigured clients for the new passphrase. Now, a few clients are unable to connect to those APs. Most clients can connect to them just fine. What is the likely problem?

- A. The APs have the wrong new passphrase
- B. The working clients have the wrong passphrase
- C. The problem clients are not 802.11-capable
- D. The problem clients have the wrong passphrase

Correct Answer: D

QUESTION 6

A user reports that his laptop was rebooted this morning and now he cannot connect to the WLAN. No other users are reporting connection problems in his work area. No network configuration changes have been made. Which one of the following is the most likely issue?

- A. The driver was updated and the new version is problematic
- B. The network SSID has changed
- C. Wrong passphrase entered for WPA2 on his laptop
- D. The AP is not allowing his laptop onto the network because it was rebooted and the reboot changed the MAC address

Correct Answer: A

QUESTION 7

What best describes passive scanning used to locate WLANs?

- A. Sending probe requests and listening for probe responses
- B. Scanning in only on frequency band

- C. Listening for beacon frames from the APs
- D. Scanning on only one channel

Correct Answer: C

QUESTION 8

You configured an AP for 802.1X/EAP authentication. You also configured several clients for the same. The clients cannot authenticate to the WLAN. When you look at the RADIUS server logs, you see that no authentication attempts have been made. Other services use the same RADIUS server without problems. At what location should you check the configuration for errors?

- A. Clients
- B. AP
- C. None of these
- D. RADIUS Server

Correct Answer: B

QUESTION 9

How many channels are available in the 2.4 GHz frequency band in all regulatory domains? Select one:

- A. 3
- B. 14
- C. 13
- D. 11

Correct Answer: B

QUESTION 10

If the AP's time is not automatically configured to match the rest of the network, what infrastructure service may be unreachable by the AP?

- A. DNS
- B. DHCP
- C. NTP
- D. FTP

Correct Answer: C
