Which portion of the Model-View-Controller paradigm is represented in Force.com as a standard or custom object?

- A. Model
- B. Controller
- C. View

Correct Answer: A

QUESTION 5

A section of data within an component, similar to a section in a standard Salesforce page layout definition. An component consists of one or more columns, each of which spans two cells: one for a field's label, and one for its value. Each component found in the body of an is placed into the next cell in a row until the number of columns is reached. At that point, the next component wraps to the next row and is placed in the first cell. To add a field from a Salesforce object to an , use an or component. Each of these components automatically displays with the field's associated label. To add fields for variables or methods that are not based on Salesforce object fields, or to customize the format of Salesforce object field labels, use an component. Each , , or component spans both cells of a single column.

- A. apex:outputLabel
- B. apex:actionPoller
- C. apex:pageblockSection
- D. apex:facet

Correct Answer: C

QUESTION 6

- A. Failure response settings
- B. Number of user licenses multiplied by 1000
- C. Through class itself
- D. List of List Objects

Correct Answer: B

QUESTION 10

Match the Force.com platform aspects with their corresponding descriptions.

Hot Area:

Development	<input type="text" value="Development"/> tools and environments used to develop Force.com application controls applications' appearance defines objects, fields, and relationships creates tasks, assigns records, does time-based actions
User interface	<input type="text" value="User interface"/> tools and environments used to develop Force.com application controls applications' appearance defines objects, fields, and relationships creates tasks, assigns records, does time-based actions
Data model	<input type="text" value="Data model"/> tools and environments used to develop Force.com application controls applications' appearance defines objects, fields, and relationships creates tasks, assigns records, does time-based actions
Logic	<input type="text" value="Logic"/> tools and environments used to develop Force.com application controls applications' appearance defines objects, fields, and relationships creates tasks, assigns records, does time-based actions

Correct Answer:

Development	<ul style="list-style-type: none">tools and environments used to develop Force.com applicationcontrols applications' appearancedefines objects, fields, and relationshipscreates tasks, assigns records, does time-based actions
User interface	<ul style="list-style-type: none">tools and environments used to develop Force.com applicationcontrols applications' appearancedefines objects, fields, and relationshipscreates tasks, assigns records, does time-based actions
Data model	<ul style="list-style-type: none">tools and environments used to develop Force.com applicationcontrols applications' appearancedefines objects, fields, and relationshipscreates tasks, assigns records, does time-based actions
Logic	<ul style="list-style-type: none">tools and environments used to develop Force.com applicationcontrols applications' appearancedefines objects, fields, and relationshipscreates tasks, assigns records, does time-based actions

QUESTION 11

A developer can use optional catch statements for any exception type in a try-catch block. However, the general exception type, `Exception`, must only be used by the last catch() block.

EXAMPLE:

```
try{
// Some risky code.
}
catch(SomeExceptionType e){
// Handle one exception type.
}
catch(SomeOtherExceptionType e){
// Handle another exception type.
}
catch(Exception e){
// This must be the last catch block.
}
~|~
```

(Select all that apply)

- A. Make calls to methods using both valid and invalid inputs.
- B. In the case of conditional logic (including ternary operators), execute each branch of code logic.
- C. Only test code using the System Administrator profile.
- D. Focus solely on test coverage percentage score.
- E. Complete successfully without throwing any exceptions, unless those errors are expected and caught in a try...catch block.
- F. None of these

Correct Answer: ABE

QUESTION 12

A template component that declares a named area that must be defined by an component in another Visualforce page. Use this component with the and components to share data between multiple pages.

- A. apex:outputText
- B. apex:barSeries
- C. apex:insert
- D. apex:inputFile

Correct Answer: C

QUESTION 13

Positions is a custom object in a recruiting application built on the Force.com platform. Department is a field on the Position object.

Which type of report should a developer create to show hiring managers the number of positions grouped by department?

- A. Summary
- B. Pivot
- C. Reporting Snapshot
- D. Tabular

Correct Answer: A

QUESTION 14

A button that is rendered as an HTML input element with the type attribute set to submit, reset, or image, depending on the tag's specified values. The button executes an action defined by a controller, and then either refreshes the current page, or navigates to a different page based on the PageReference variable that is returned by the action. An component must always be a child of an component.

See also:

- A. apex:commandButton
- B. apex:flash
- C. apex:emailPublisher
- D. apex:actionRegion

Correct Answer: A

QUESTION 15

What datatype is used for standard or custom objects that store record data? (No Answer)

- A. System
- B. sObject
- C. Global

Correct Answer: B
