QUESTION 1

Requiring frequent password changes can compromise security because _____.

- A. Users tend to write down frequently changed passwords
- B. It makes the password database an easier target for hackers
- C. It makes it harder for legitimate users to access their own data
- D. It burdens the IT help desk with requests for forgotten or expired passwords

Correct Answer: A

QUESTION 2

What is the most common direction of airflow through a rack mount blade server assembly?

- A. Side to side
- B. Front to back
- C. Back to front
- D. Bottom to top

Correct Answer: B

QUESTION 3

Why will touching a doorknob after walking across a carpet only cause a slightly painful spark, but touching a live utility wire inside the data center could cause death?

- A. The utility company's voltage is much higher than that of the spark.
- B. The spark generates DC power but the utility company generates AC power.
- C. The current available from a spark is much less than the current available from the utility company.
- D. The human skin has a high enough resistance to keep from being hurt from the spark's voltage but not from the utility company's voltage.

Correct Answer: C

QUESTION 4

What are the three basic physical security categories that describe technologies for personnel identification? (Choose three.)

- A. Who you are
- B. Where you are
- C. What you have
- D. Who you know
- E. What you know

Correct Answer: ACE

QUESTION 5

What is one cause of oscillatory transients?

- A. Lightning strikes
- B. Non-unity power factors
- C. Motors turning on and off
- D. Static electricity discharges

Correct Answer: C

QUESTION 6

Based on individual network IP addresses, an enterprise management system (EMS) handles which type of information?

- A. Device centric
- B. Network centric
- C. Element centric
- D. Data point centric

Correct Answer: A

QUESTION 7

Which three key components make up a three-phase stationary power distribution unit? (Choose three.)

- A. Rectifier
- B. Panel board
- C. Input transformer

D. Rack mount bracket

E. Input circuit breaker

Correct Answer: BCE

QUESTION 8

What are three transformer types? (Choose three.)

A. Step-up transformer

B. Isolation transformer

C. Step-down transformer

D. Delayed input transformer

E. Limited induction transformer

Correct Answer: ABC

QUESTION 9

How do enclosures improve rack system cooling?

A. By improving natural air flow

B. By improving fire suppression

C. By allowing hot and cold air to mix together

D. By preventing hot and cold air from mixing together

Correct Answer: D

QUESTION 10

What characteristic is common to all cooling architectures?

A. Deployable with on a raised floor

B. Top or bottom airflow configuration

C. Cooling equipment occupies white space

D. Easily adaptable with changes in infrastructure

Correct Answer: A

QUESTION 11

During a power outage, a retail store is likely to exhibit which cost of downtime profile?

- A. Cost of downtime per hour remains the same.
- B. Cost of downtime per hour increases with time.
- C. Cost of downtime per hour decreases with time.
- D. Cost of downtime per hour is exponential with time.

Correct Answer: A

QUESTION 12

What is one positive effect of using standardized racks / enclosures that are universally compatible with vendors' equipment?

- A. Improved monitoring
- B. Increased load capacity
- C. Mixing of hot and cold air
- D. Decreased lifecycle costs

Correct Answer: D

QUESTION 13

Which two are characteristics of an agile data center? (Choose two.)

- A. Provision a UPS module with a different power capacity.
- B. Change out plug types when new IT equipment is installed.
- C. Design for "worst case" capacity to prevent future downtime.
- D. Have N+1 redundancy in part of the data center and 2N in another part based on equipment criticality.

Correct Answer: BD

QUESTION 14

Which method of heat transfer causes electromagnetic waves?

- A. Radiation
- B. Convection

C. Conduction

D. Evaporation

Correct Answer: A

QUESTION 15

Which two factors contribute to the amount of noise an electrical circuit contains within a building infrastructure? (Choose two.)

A. The temperature ranges within the data center

B. The integrity of the grounding system throughout the building

C. The voltage type available to the building at the service entrance

D. The degree to which electrical loads are balanced throughout the building

Correct Answer: BD
