## QUESTION 1

Which functions are provided by InfoAllocator for OceanStor 9000 administrators? (Choose all that apply.)

- A. Properly planning users.
- B. Managing and monitoring users
- C. Collecting statistics and querying user information.

Correct Answer: ABC

---

## QUESTION 2

Which is not a necessary component of the NAS system architecture?

- A. Accessible storage array
- B. File system
- C. Service interface for accessing a file system
- D. Fibre Channel switch

Correct Answer: D

---

## QUESTION 3

In an OceanStor 9000 storage system, the management IP address is 100.16.100.3, the front-end service network segment is from 192.168.100.1 to 192.168.100.20, the dir00l directory is shared, and the share path is /dir00l. Which of the following statements about the share access are correct? (Select two)

- A. The clients that attempt to access the share must interwork with IP address 100.16.100.3.
- B. The clients that attempt to access the share must interwork with any IP address in the network segment from 192.168.100.1 to 192.168.100.20.
- C. If the client runs the 5U5E operating system, use the mount -t nfs ipaddress:\dir001 \mnt command to mount the share.
- D. If the client runs the SUSE operating system, use the mount -t nfs ipaddress:/dir001 /mnt command to mount the share.

Correct Answer: BD

---

## QUESTION 4

Which of the following statements about the bucket is incorrect?

- A. A bucket is a container for storing objects. It can be considered as a directory that can be accessed through the network.
- B. Buckets can be nested, thereby avoiding complicated container structure.
- C. The function of a bucket is similar to that of a container. Both of them can be accessed through the network.
- D. Lifecycle management of a bucket means automatically deleting objects from buckets after a certain period of time based on configuration rules without client intervention.

Correct Answer: B

**QUESTION 5**

Which of the following statements about multipart upload of object storage service are correct? (Choose all that apply.)

- A. The object storage service (compatible with Amazon S3 APIs) limits the size of a single uploaded object to 5 GB.
- B. All uploaded parts are combined into one or more objects. The size of a combined object is not greater than 5 TB.
- C. For a large object, or the object that needs to be uploaded for several times, you can use multipart upload to complete the upload.
- D. After initiating a multipart upload task, you can cancel it.

Correct Answer: ACD

**QUESTION 6**

The following figure shows the ports of two CE6850 switches when the OceanStor 9000 uses GE for the front-end network and 10GE for the back-end network. If the OceanStor 9000 uses C nodes, the ports in which area of the CE6850 switch must ports AO-0 and AO-1 on all the C nodes be connected to?

- A. A
- B. B

C. C

D. You do not need to connect C nodes to the CE6850 switch.

Correct Answer: A

---

## QUESTION 7

Which of the following is not the advantage brought by global cache?

A. To improve cache space utilization.

B. To improve the data hit ratio.

C. To improve the overall system performance.

D. To improve system security and reliability.

Correct Answer: D

---

## QUESTION 8

Which of the following components comprise the Storage Foundation of an N8500 clustered NASsystem? (Select two)

A. VxVM

B. VCS

C. VxFS

D. SFS

Correct Answer: AC

---

## QUESTION 9

Which command is used to query the NFS sharing status for N8500 V200R001?

A. hagrp -status

B. hagrp -state | grep NFS

C. service NFS status

D. service NFS show

Correct Answer: B

---

## QUESTION 10

Which of the following disks are used by an N8500 clustered NAS engine as system disks?

- A. Fibre Channel disks
- B. SAS disks
- C. SATA disks
- D. SSDs

Correct Answer: D

---

## QUESTION 11

Neither online nor offline software version upgrade of Huawei OceanStor 9000 affects device management.

- A. True
- B. False

Correct Answer: B

---

## QUESTION 12

Which command is used to check whether a file system is mounted using the support account for N8500 V200R001?

- A. cfsmntadm display
- B. cfsmountadm display
- C. cfsmntadm show
- D. cfsmountadm show

Correct Answer: A

---

## QUESTION 13

Which of the following must be considered before you optimize the performance of an N8500 clustered NAS storage system? (Select three)

- A. Evaluate the feasibility of the performance target based on your experience.
- B. Use a fixed testing environment for performance optimization.
- C. Determine the testing mode based on services to ensure the comparability of the test results.
- D. Performance optimization has no impact on ongoing services. You do not need to worry about the pressure on services.

Correct Answer: ABC

---

## QUESTION 14

Which of the following statements about the CIFS sharing configuration of Huawei OceanStor 9000 is false?

- A. If Enable notify is selected, the changes made by a client to a directory cannot be detected by other clients that are accessing the directory or its parent directory.
- B. If Enable Oplock is selected, files are locally cached before being sent to the shared, improving clients\\ access efficiency.
- C. If Enable guest is selected, users can access shared directories on clients without entering a user name and password.
- D. If Signature enforcement is selected, clients are required to enable the signature function. If a client does not enable the signature function, the OceanStor 9000 rejects the data access requests initiated by that client.

Correct Answer: A

---

## QUESTION 15

Which of the following statements about quota and statistics is incorrect?

- A. When the bucket capacity reaches its quota, data cannot be written to the bucket.
- B. When the bucket capacity of an account reaches its quota, this account cannot write data to the bucket.
- C. The available bucket resources include the bucket size, the number, and the number of objects in the bucket.
- D. The available bucket resources include the account of quota, the number of buckets, the number of objects, and the total capacity.

Correct Answer: C
