## QUESTION 9

Is this how HPE Serviceguard Extension for SAP (SGeSAP) resumes operations when a hardware failure is detected?

SGeSAP leverages SAP system replication software mirroring and automates the required steps to bring HANA back to operation.

A. Yes

B. No

Correct Answer: A

HPE Serviceguard software provides a clustering solution for SAP HANA scale-up and scale-out instances. The solution leverages the SAP system replication software mirroring and automates the required steps to bring HANA back to operation after any component failure. This includes HANA memory reconfigurations, secondary HANA instance takeovers and primary HANA instance demotions, virtual IP address moves and dual purpose instance handling. The scale-out cluster solution implements a many-to-many failover of all HANA nodes of the instance. It aims to cover Disaster Recovery scenarios and complements the host auto-failover HA solution that is built into HANA by SAP to protect against single node outages.
