Correct Answer: BCE

QUESTION 5

What will be the initial posture token of a device connecting with 802.1x authentication for the first time?

- A. Unhealthy
- B. Quarantine
- C. Checkup
- D. Unknown
- E. Healthy

Correct Answer: D

When the user connects to the 802.1x SSID for the first time the Posture token will be Unknown, the initial role will be returned to the controller and the user will be redirected to OnGuard Agent page. The user will download and run the dissolvable or persistent agent and the agent will send the health results to the Webauth Health Check service, which will update the posture token in the Endpoint database and send a Bounce User request to the controller. That will cause the user to re-authenticate and this time the posture token will be known. Reference:
