## QUESTION 1

A FortiGate has the following LDAP configuration.

```
config user ldap
  edit "Training-Lab"
    set server "10.0.1.10"
    set cnid "cn"
    set dn "cn=users,dc=trainingad,dc=training,dc=lab"
    set type regular
    set username "CN=Administrator,DC=trainingAD,DC=training,DC=lab"
    set password ENC XXX
  next
```

On the Windows LDAP server 10.0.1.10, the administrator used dsquery, which returned the following output:

```
>dsquery user -samid admin*
```

```
"CN=Administrator,CN=Users,DC=trainingAD,DC=training,DC=lab"
```

According to the output, which FortiGate LDAP setting is configured incorrectly?

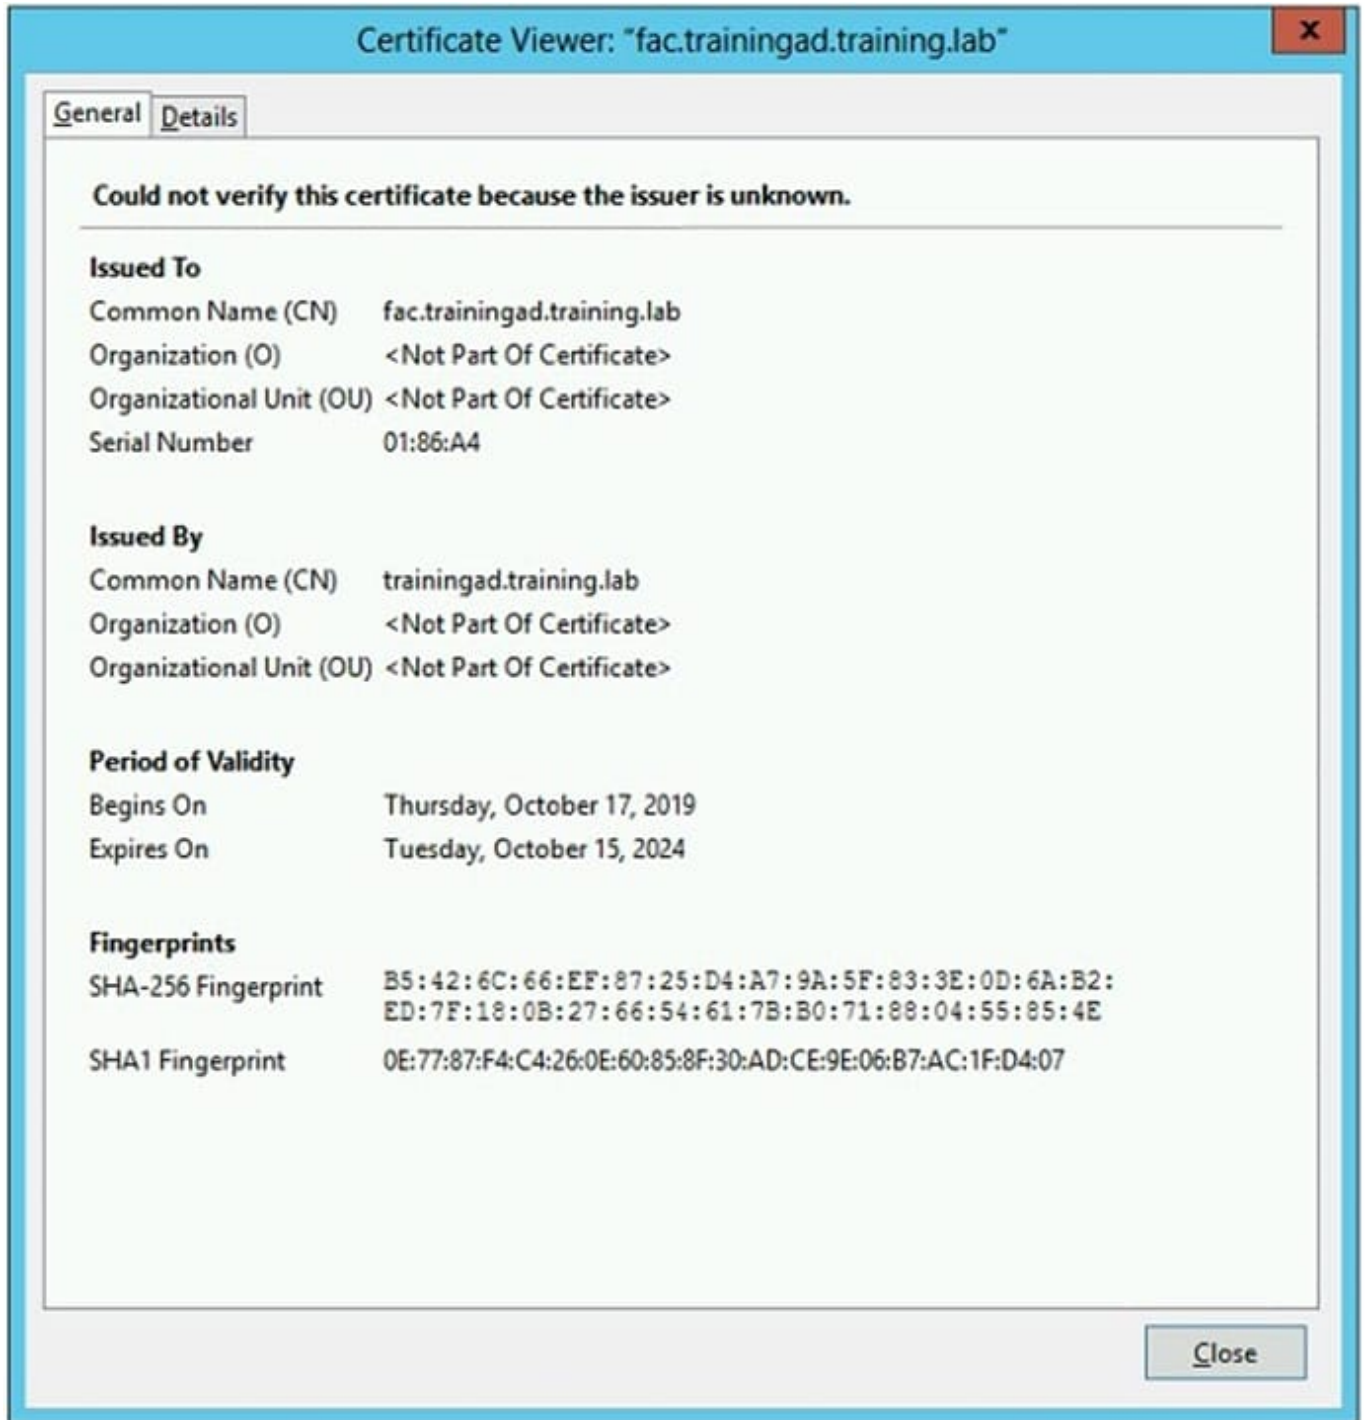

- A. dn
- B. sAMAccountName
- C. username
- D. cnid

Correct Answer: B

---

## QUESTION 2

Refer to the exhibit showing certificate values.

Wireless guest users are unable to authenticate because they are getting a certificate error while loading the captive portal login page. This URL string is the HTTPS POST URL guest wireless users see when attempting to access the network using the web browser:

```
https://fac.trainingad.training.com/guests/login/?loginandpost=https://auth.trainingad.training.1ab:1003/fgtauthandmagic=000a038293d1f411andusermac=b8:27:eb:d8:50:02andapmac=70:4c:a5:9d:0d:28andapip=10.10.100.2anduserip=10.0.3.1andssid=Guest03andapname=PS221ETF18000148andbssid=70:4c:a5:9d:0d:30
```

Which two settings are the likely causes of the issue? (Choose two.)

A. The external server FQDN is incorrect.

- B. The FortiGate authentication interface address is using HTTPS.
- C. The wireless user's browser is missing a CA certificate.
- D. The user address is not in DDNS form.

Correct Answer: AC

## QUESTION 3

Refer to the exhibit.

Examine the packet capture shown in the exhibit, which contains a RADIUS access request packet sent by FortiSwitch to a RADIUS server.

```
> Frame 1: 164 bytes on wire (1312 bits), 164 bytes captured (1312 bits)
> Ethernet II, Src: Vmware_96:70:b5 (00:50:56:96:70:b5), Dst: Vmware_96:d8:76 (00:50:56:96:d8:76)
> Internet Protocol Version 4, Src: 10.0.1.254, Dst: 10.0.1.150
> User Datagram Protocol, Src Port: 48704, Dst Port: 1812
✓ RADIUS Protocol
  Code: Access-Request (1)
  Packet identifier: 0x96 (150)
  Length: 122
  Authenticator: 49a700a9981a2eb044bf811f482412a0
  [The response to this request is in frame 2]
  ✓ Attribute Value Pairs
    > AVP: l=18 t=NAS-Identifier(32): S124DP3X16008048
    > AVP: l=19 t=User-Name(1): 00-E0-4C-36-0D-5E
    > AVP: l=34 t=User-Password(2): Encrypted
    > AVP: l=6 t=NAS-Port-Type(61): Ethernet(15)
    > AVP: l=19 t=Calling-Station-Id(31): 00-E0-4C-36-0D-5E
    > AVP: l=6 t=Service-Type(6): Call-Check(10)
```

Why does the User-Name field in the RADIUS access request packet contain a MAC address?

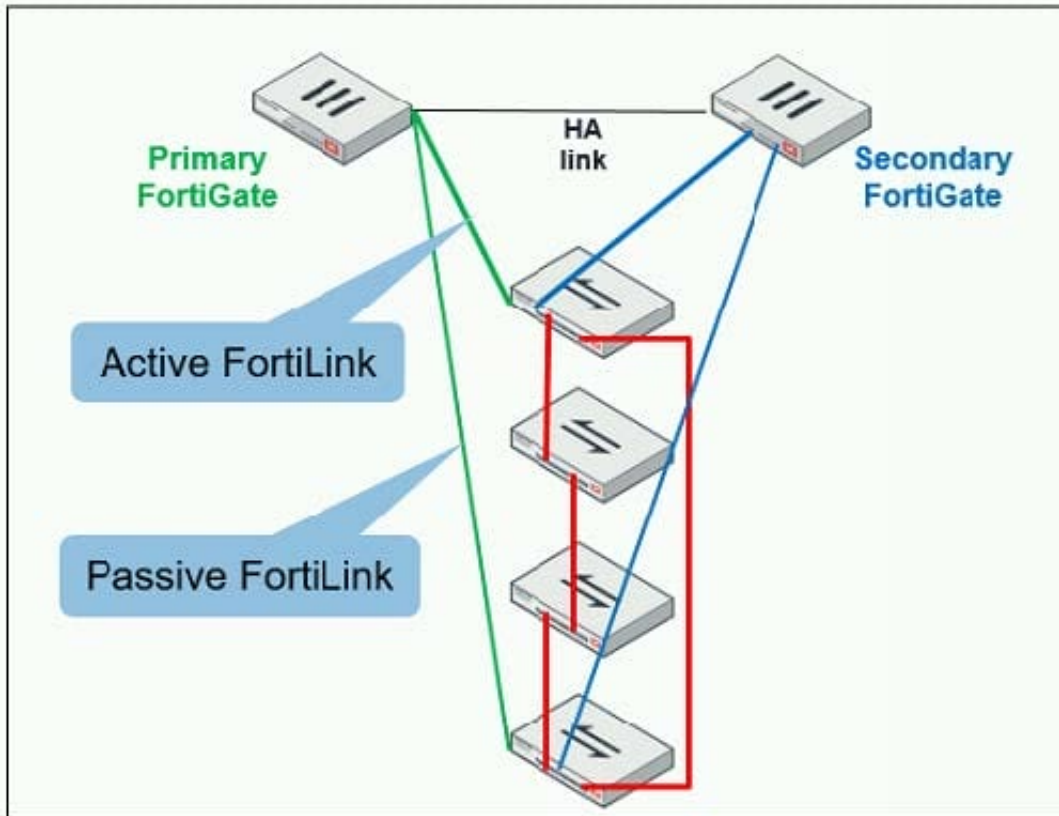

- A. The FortiSwitch interface is configured for 802.1X port authentication with MAC address bypass, and the connected device does not support 802.1X.
- B. FortiSwitch authenticates itself using its MAC address as the user name.
- C. The connected device is doing machine authentication.
- D. FortiSwitch is replying to an access challenge packet sent by the RADIUS server and requesting the client MAC address.

Correct Answer: D

#### QUESTION 4

Refer to the exhibit.

The exhibit shows two FortiGate devices in active-passive HA mode, including four FortiSwitch devices connected to a ring.

Which two configurations are required to deploy this network topology? (Choose two.)

- A. Configure link aggregation interfaces on the FortiLink interfaces.
- B. Configure the trunk interfaces on the FortiSwitch devices as MCLAG-ISL.
- C. Enable `fortilink-split-interface` on the FortiLink interfaces.
- D. Enable STP on the FortiGate interfaces.

Correct Answer: CD

Reference: <https://www.fortinetguru.com/2019/07/fortilink-configuration-using-the-fortigate-gui/>

#### QUESTION 5

Examine the following output from the FortiLink real-time debug.

```
FortiGate# diagnose debug application fortilinkd 3
fl_node_apply_switch_port_fgt_properties_update_with_portname[977]:port properties are different for
port(port9) in switch(F9108D3W17002387) old(0x1) new(0x1)o-peer-port() n-peer-port(port2) o-peer-device() n-
peer-device(FGVMEVBB6ITDAO1B)
... flp_event_handler[605]:node: port2 received event 110 state FL_STATE_READY switchname flags 0x26a
... flp_event_handler[605]:node: port2 received event 111 state FL_STATE_READY switchname flags 0x26a
... flp_send_pkt[339]:pkt-sent {type(5) flag=0xe2 node(port2) sw(port2) len(26) smac: 0: c:29:51:dd:a0
dmac:70:4c:a5:24:ba:4f
```

Based on the output, what is the status of the communication between FortiGate and FortiSwitch?

- A. FortiGate is unable to authorize the FortiSwitch.
- B. FortiGate is unable to establish FortiLink tunnel to manage the FortiSwitch.
- C. FortiGate is unable to located a previously managed FortiSwitch.
- D. The FortiLink heartbeat is up.

Correct Answer: D
