## QUESTION 1

A customer views a product available in multiple color options. The customer must select only one color for each product. Which UI control allows a developer to present the user with all color choices at once, without prompting or clicking, while ensuring that the user can only select one of the color options?

- A. Radio buttons
- B. Text input
- C. Drop-down
- D. Check box

Correct Answer: A

---

## QUESTION 2

You want your application to have consistent styling across portals. You want the backgroundcolor of all buttons in your application to be blue. You want the background color of the buttons to be easily updated in case corporate branding changes. Which attribute do you modify to set the background color?

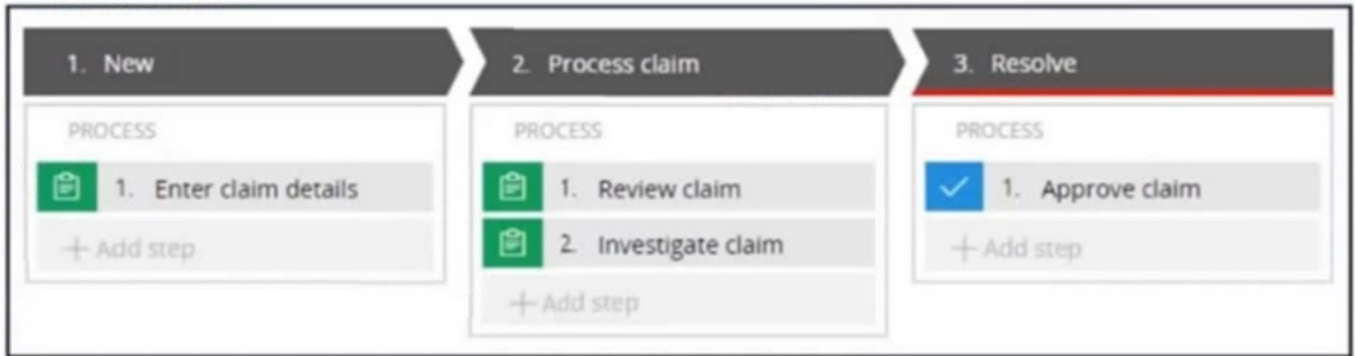

- A. The application skin
- B. The buttons format
- C. The controls format
- D. The background mixin

Correct Answer: B

---

## QUESTION 3

An insurance claim case type is defined as follows:

If the Review claim step is configured to set the status to Pending-Investigation, when is the status of the case set to Pending-Investigation? Available Choices (select all choices that are correct)

- A. When the Review claim step completes
- B. When Investigate claim step completes
- C. When the Process claim stage starts
- D. When the Review claim step starts

Correct Answer: D

Explanation: The status of a case is set to the value configured in the Status field of an assignment shape when that assignment starts. Therefore, if the Review claim step is configured to set the status to Pending-Investigation, the status of the case is set to Pending-Investigation when the Review claim step starts.

## QUESTION 4

A door manufacturer offers a finite list of colors on all its doors. As part of the order, customers can select the color of the door. Select the data page definition configuration settings to source a color drop-down list to minimize memory usage. Object Type - ACME-Products-Data-Color or ACME-Products-Work-Color or ACME-Products-Work-ColorFeedback Edit Mode - Readonly Or Editable Or Savable Scope - Thread Or Requestor Or Node

- A. Page, ACME-Products-Data-Color,ReadOnly,Node
- B. List, ACME-Products-Data-Color,ReadOnly,Thread
- C. Page, ACME-Products-Data-Color,ReadOnly,Requestor
- D. List, ACME-Products-Work-Color,ReadOnly,Node
- E. List, ACME-Products-Work-ColorFeedback,ReadOnly,Node
- F. List, ACME-Products-Data-Color,ReadOnly,Node

Correct Answer: F

**QUESTION 5**

In an online retail application, the Order Receipt view displays a list of the products ordered, including the product image, unit cost, and quantity. The total cost of the order is displayed at the bottom of the view. Which two configurations on the Order Receipt view must be used together to display the required information as described? (Choose two.)

Available Choices (select all choices that are correct )

- A. Add a repeating dynamic layout with embedded dynamic layouts
- B. Add the total cost Inside the repeating dynamic layout
- C. Add a dynamic layout with an embedded repeating dynamic layout
- D. Add the total cost outside the repeating dynamic layout

Correct Answer: AD

Explanation: To display the required information as described, you can add a repeating dynamic layout with embedded dynamic layouts and add the total cost outside the repeating dynamic layout. A repeating dynamic layout is a UI element that displays data from a list or table source in various formats, such as cards, grids, or inline grids. You can embed dynamic layouts within a repeating dynamic layout to organize and present data in different sections or columns. You can add the total cost outside the repeating dynamic layout to display it at the bottom of the view. References: <https://community.pega.com/knowledgebase/articles/user-experience/86/configuring-repeating-dynamic-layouts>

---

**QUESTION 6**

On a service level, the passed deadline interval is measured from Available Choices (select all choices that are correct)

- A. the end of the goal interval
- B. the end of the deadline interval
- C. when a user begins the assignment
- D. when the assignment is ready for a user

Correct Answer: A

Explanation: On a service level, the passed deadline interval is measured from the end of the goal interval. The goal interval defines when to take action because a step or case is taking too long to complete. The passed deadline interval defines when to take further action because a step or case is past the deadline.

**QUESTION 7**

You are configuring an external data source using the Integration Designer. You have the REST, Dev, Stage, and Prod endpoint URLs, and a name for the data source. What other information do you need to configure the external data source?

- A. The name of the database where the source data is stored
- B. The data views using the external data source
- C. A plan for mapping the data and REST response fields
- D. A backup endpoint URL if the configured URL refuses to connect

Correct Answer: C

## QUESTION 8

In which situation do you configure branched rulesets?

- A. One team creates a new patch for an application while another team creates a new major version of the application
- B. You need to delegate rules to process owners from the business
- C. Multiple teams need to work on the same application version
- D. A team needs to work on the next version of an application while preparing to migrate the current version.

Correct Answer: C

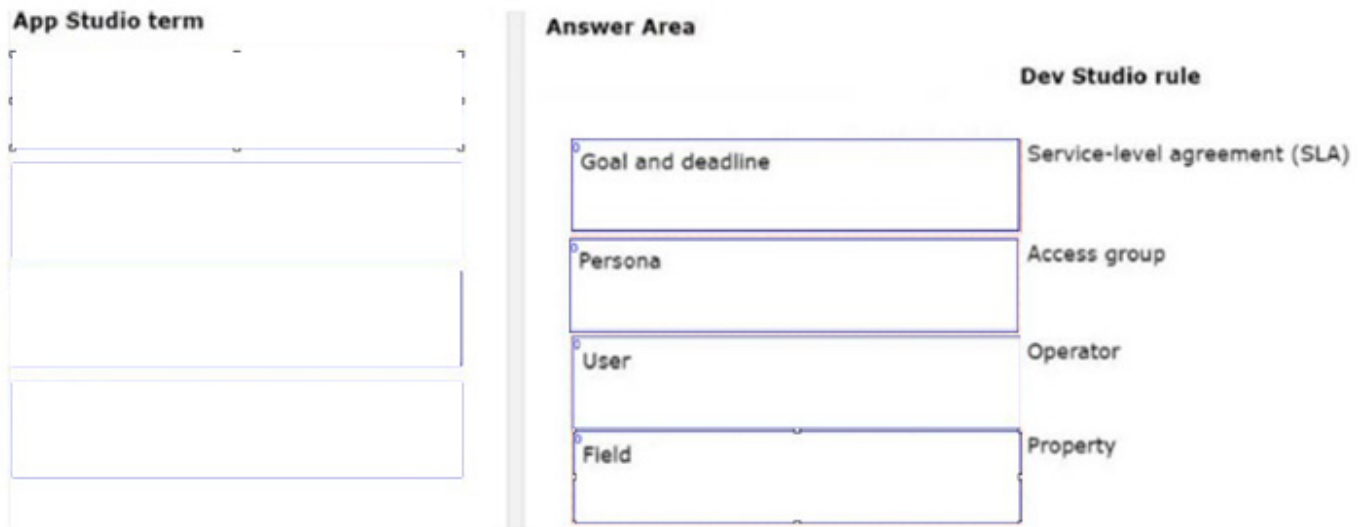

## QUESTION 9

Drag the term that is used in App Studio from the left to the rule that you use in Dev Studio on the right.

Select and Place:

App Studio term	Answer Area	Dev Studio rule
Field		Service-level agreement (SLA)
Goal and deadline		Access group
User		Operator
Persona		Property

Correct Answer:

## QUESTION 10

You want to unit test a rule to ensure that the rule executes as intended, you need to populate a test page with valid data.

Which two options allow you to populate a test page before testing the rule? (Choose two)

Available Choices (select all choices that are correct)

- A. Configure an assertion to define the required data
- B. Configure a validate rule to populate the page with the necessary data
- C. Run a data transform to create the test page.
- D. Copy data from an existing clipboard page

Correct Answer: CD

Explanation: To populate a test page with valid data before testing the rule, you can run a data transform to create the test page or copy data from an existing clipboard page. A data transform is a rule that defines how to convert data that is in one format and class (the source) into data of another format and class (the target). The clipboard is a temporary memory area on the server that stores property values for your application.

## QUESTION 11

Select each description on the left and drag it to the correct property mode on the right.

Select and Place:

<u>Description</u>	<u>Description</u>	<u>Property Mode</u>
A numerically ordered list of customer accounts where the accounts relate to one another.		Single Value
An unordered list of the customer home, business and mailing addresses where each address contains the street, city, state, and postal code.		Page Group 
The date of purchase on an expense report.		Page List

Correct Answer:

<u>Description</u>	<u>Description</u>	<u>Property Mode</u>
	The date of purchase on an expense report.	Single Value
	An unordered list of the customer home, business and mailing addresses where each address contains the street, city, state, and postal code.	Page Group 
	A numerically ordered list of customer accounts where the accounts relate to one another.	Page List

## QUESTION 12

In which two situations is it appropriate to use a decision table? (Choose two) Available Choices (select all choices that are correct)

- A. dance studio recommends a membership type based on the number and type of dance classes the customer wants to attend every month
- B. Order total is calculated based on the quantity and price of the items in the customer's shopping cart
- C. A hair care company suggests a line of products to customers based on their hair type, scalp moisture, hair moisture, and whether it is color-treated.
- D. If customers decide to add insurance, checked bags or early boarding to their airline tickets extra fees are added to their order total

Correct Answer: AC

Explanation: In these two situations, it is appropriate to use a decision table because they involve deriving values that have one of a few possible outcomes based on multiple variables. For example, the dance studio can use a decision table to recommend different membership types based on different combinations of number and type of dance classes. The hair care company can use a decision table to suggest different product lines based on different combinations of hair characteristics.

### QUESTION 13

Users create Insurance Coverage Request Cases to authorize insurance payments. Users enter information that includes the name of the patient, the date of the procedure and the type of the procedure. After entering the information, user submits the request for a review of the patient's insurance policy. Because multiple users enter requests, duplicate request can occur. A request is considered a duplicate if the patient name, procedure type, procedure date match an existing request. You have been given two requirements:

-Ensure that users can identify duplicate requests.

-

If a case is duplicate, it is not written to the database. Otherwise, write the case to the database. Which two options configure application so that users can identify duplicate requests? (Choose two)

A.

Add a duplicate search step to the case life cycle design.

B.

Configure a duplicate search decision table and add it to a Decision shape

C.

Configure weighted conditions.

D.

Configure a validate rule to validate matching cases.

Correct Answer: BD

---

### QUESTION 14

You need to localize correspondence into a language that is unavailable in the Pega language pack Which option satisfies the requirement? Available Choices (select all choices that are correct)

A. Run the Localization wizard and add translations to Translation.html.

B. Leverage translation services SOAP calls and enable records for translation.

- C. Configure a field value record that contains the correspondence text.
- D. Create the Translation rule manually and include the rule in the application ruleset.

Correct Answer: D

Explanation: To localize correspondence into a language that is unavailable in the Pega language pack, you can create the Translation rule manually and include the rule in the application ruleset. A Translation rule is a rule that defines how to translate text from one language to another. You can create a Translation rule manually by using the Create menu in Dev Studio and selecting Rule > Integration-Resources > Translation. You can then specify the source and target languages, the text to be translated, and the translated text. You can also use a decision table or a connector to provide the translated text. You must include the Translation rule in the application ruleset so that it can be used by the application. References: <https://community.pega.com/knowledgebase/articles/integration/86/translation-rules>

---

## QUESTION 15

Which two requirements can you support by configuring a mobile channel in App Studio? (Choose two.)

Available Choices (select all choices that are correct)

- A. Lock the application after 20 minutes of inactivity
- B. Set the dimensions of an application icon to 180x180 pixels
- C. Grant access to the mobile app for a specific user
- D. Configure a left swipe behavior to open a message

Correct Answer: AD

Explanation: These two requirements can be supported by configuring a mobile channel in App Studio. A mobile channel allows you to define various settings and features for your mobile app, such as security, branding, navigation, gestures,

push notifications, offline support, and so on. References:

<https://community.pega.com/knowledgebase/articles/mobile/86/configuring-mobile-app- channels>
