QUESTION 1

An administrator is upgrading the backup server from a single tape drive to a SCSI tape library. The library has been unpackaged, mounted, and the library drivers installed. Which of the following items should the administrator have to connect the device to the backup server?

- A. SCSI cable
- B. SCSI interface adapter on the tape library
- C. SCSI termination card on the server
- D. iSCSI cable

Correct Answer: A

QUESTION 2

An administrator recently installed a known good RAID adapter. During boot up, the administrator is able to access the RAID configuration utility; however, when the administrator checks for the card in the operating system, it does not show up. Which of the following should the administrator do FIRST?

- A. Move the RAID adapter to another slot.
- B. Perform a baseline of the system.
- C. Contact the reseller of the adapter for a replacement card.
- D. Check the RAID adapter's manufacturer for the latest drivers.

Correct Answer: D

QUESTION 3

A network administrator reports that they receive the following error message when attempting an action that would result in an entry in the system log: "Unable to write to system log!" The administrator has successfully written to this log in the past. Which of the following is the MOST likely reason for the error?

- A. There is malware on the server that hosts the log file.
- B. The network administrator does not have permission to write to the log file.
- C. The drive that hosts the system log is fragmented.
- D. The drive that hosts the system log is out of disk space.

Correct Answer: D

QUESTION 4

Which of the following devices is susceptible to ESD?

- A. Certified power cable
- B. Memory modules
- C. CAT5 cable
- D. USB flash drives

Correct Answer: B

QUESTION 5

An administrator needs to explain to management why updates are needed for the server. Which of the following is the BEST explanation to give?

- A. The updates guarantee that the server will work smoothly.
- B. The updates show management that IT is working diligently.
- C. The updates address driver and security issues.
- D. The updates are needed to allow the system monitoring agents to connect to the system.

Correct Answer: C

QUESTION 6

A server was recently updated with the latest antivirus definitions. Immediately after the update, the server begins to report 'file not found' errors for a mission critical application. Which of the following is the MOST likely reason for this?

- A. The update was done incorrectly and now the server needs to be restarted.
- B. The update has discovered viruses on the server and removed those virus files.
- C. The update requires a reboot for the files to process correctly.
- D. The update has quarantined files that are false positives.

Correct Answer: D

QUESTION 7

An administrator has just installed a new NIC into the server. The system POSTs fine and the NIC is recognized by the OS, but it does not receive an IP address. Which of the following is the MOST likely cause of this?

- A. The NIC is not on the HCL.
- B. The driver is incorrect on the server.

- C. The patch cable has not been seated properly.
- D. The NIC is not seated properly.

Correct Answer: C

QUESTION 8

Which of the following describes when a newly built network server would MOST likely become infected by malware?

- A. After a hot fix has been applied
- B. Before joining an active directory domain
- C. After the TCP/IP stack is enabled
- D. After the WMI service is started

Correct Answer: C

QUESTION 9

An organization which deploys a large number of multifunction printers from different manufacturers is planning to upgrade their print server to the latest operating system. After the upgrade, the technician discovers that the current print management software will not run on the new operating system. Which of the following should the technician check before purchasing new print management software to ensure it is compatible with all of the company's printers?

- A. The technician should consult the new software's HCL
- B. The server ACL must be compared against the print management software requirements
- C. The technician should verify that all printer drivers are signed
- D. All printer manuals should be checked for compatibility with the print management software

Correct Answer: A
