QUESTION 1

Which three actions should an administrator take before creating a vCloud Automation Center Business Group? (Choose three.)

- A. Identify the Active Directory distribution groups for the users.
- B. Determine which users will be assigned the Business Group Manager role.
- C. Identify the Active Directory security groups for the users.
- D. Determine which Cost Profiles will be used for the users.
- E. Identify the Distinguished Name of Containers where the Users and Groups for the Tenant are located.

Correct Answer: BCE

QUESTION 2

Once an administrator has added a new property definition to the Properties Dictionary, in which two places can it be used? (Choose two.)

- A. In a Build Profile
- B. In a Machine Blueprint
- C. In an Entitlement
- D. In a Service Blueprint

Correct Answer: AB

QUESTION 3

A user needs to modify the threshold value of the Fault badge within vCenter Operations Manager. What should the administrator do to enable the user to complete this operation?

- A. Add the vCenter Operations Manager Admin privilege on the user in vCenter Server.
- B. Modify the user's rights from the Access Rights tab.
- C. Modify the group's rights from the Account tab.
- D. Add the Adjust Badge Thresholds privilege on the user in vCenter Server.

Correct Answer: A

QUESTION 4

Which information can the administrator use to identify iSCSI nodes?

- A. MAC address
- B. IQN
- C. WWN
- D. LUN ID

Correct Answer: B

QUESTION 5

A vSphere administrator needs to increase the capacity of an existing Storage Distributed Resource Scheduler (SDRS) datastore cluster. The storage administrator has provisioned two new NFS datastores to be added to the cluster.

The vSphere administrator receives an error message, preventing the administrator from adding the newly provisioned datastores to the cluster.

What is the likely reason that the action failed?

- A. There are virtual machines running on the datastores being added to the cluster.
- B. The datastores in the SDRS cluster are VMFS datastores.
- C. The datastores in the existing cluster have hardware acceleration enabled and the new datastores do not.
- D. The SDRS cluster has not been placed into maintenance mode.

Correct Answer: B

QUESTION 6

Refer to the Exhibit.

What is portrayed in the performance chart shown in the exhibit?

- A. The ESXi host running the VM has Transparent Page Sharing enabled.
- B. The virtual machine's memory share value is set too high.
- C. The virtual machine is memory constrained.
- D. The ESXi host running the VM is low on memory.

Correct Answer: D

QUESTION 7

An administrator needs to change the network a virtual machine will attach to. The virtual machine is deployed using vCloud Automation Center, but when the administrator attempts to modify the configuration, the requested network is not displayed.

Why is the network unavailable in the interface?

- A. It is unavailable in the Provisioning Group.
- B. It is unavailable in the Reservation.
- C. It is unavailable in the Blueprint.
- D. It is unavailable in the Build Profile.

Correct Answer: B

QUESTION 8

An application team is implementing a new solution in a vSphere environment. The vendor states the application is memory intensive.

The application is very unstable when operating without adequate on-demand access to physical memory. The application's virtual machines have been assigned to the Mission Critical resource pool.

Which resource pool setting will help ensure the application has adequate access to memory?

- A. Memory reservation
- B. High memory share value
- C. Unlimited memory
- D. Expandable reservation

Correct Answer: A

QUESTION 9

After an upgrade, in what order must vCloud Automation Center appliances be joined to the cluster?

- A. Join virtual appliances to a cluster in the reverse order from which you shut them down before upgrading.
- B. Join virtual appliances to a cluster in the same order from which you shut them down before upgrading.
- C. Join virtual appliances to a cluster in any order from which you shut them down before upgrading.
- D. Join virtual appliances to a cluster in numerical order (by name) from which you shut them down before upgrading.

Correct Answer: A

QUESTION 10

An Administrator needs to sync templates from one vCenter Server to another vCenter Server in a different physical datacenter.

Which product allows for this functionality?

- A. vSphere Update Manager
- B. vCloud Connector
- C. NSX-v
- D. vCloud Director

Correct Answer: B

QUESTION 11

An administrator wants a FlexClone machine blueprint to deploy only on FlexClone storage. What is the best method to meet the requirements?

- A. Create a Reservation Policy, and assign the Reservation Policy to the blueprint and storage for FlexClone machine deployments.
- B. Create a business group specifically for FlexClone machine deployments and assign the FlexClone reservation to the business group.
- C. Create a tenant specifically for FlexClone machine deployments and assign the FlexClone reservation to the tenant.
- D. Create a Reservation Policy, assign the blueprint and storage for FlexClone machine deployments to the Reservation Policy.

Correct Answer: A

QUESTION 12

While trying to login into a tenant a blank page is displayed with a Submit button in the upper left-hand corner.

The Identity Appliance messages log located in /var/log/ shows an error message similar to the following:

T16:50:18-05:00 lsassd[2913]: GSSAPI Error: The referenced context has expired (Unknown error) T08:34:41-06:00 vmdirD. t@139870073485056: Lockout policy check - password expired.

(cn=tenantadmin,cn=users,dc=tenant)

T11:58:03-06:00 lsassd[2943]: GSSAPI Error: The referenced context has expired (Unknown error)....

Account "cn=tenantadmin,cn=users,dc=qic" password expired and caused login/bind from IDM to fail.

YYYY-03-18

T11:38:46-06:00 denqca3vcacid01 vmdirD. t@140689332778752: LoginBlocked DN

(cn=tenantadmin,cn=users,dc=tenant), error (9239)(Account access blocked)

What event caused this error?

- A. The SSO internal tenant administrator password has expired.
- B. The service account used to start IIS does not have sufficient privileges.
- C. The integrated Windows authentication identity source experiences an error.
- D. The Tenant Administrator account has been locked in Active Directory.

Correct Answer: A

QUESTION 13

An Administrator is configuring vCloud Connector's (vCC) Content Sync. After configuring the vCC Server and vCC Node the vSphere folder is not syncing to the destination folder.

What could be wrong?

- A. Publish to Cloud Library has not been selected
- B. Publish to Content Library has not been selected
- C. Prepare Folder for Content Library has not been selected
- D. Prepare Cluster for Content Library has not been selected

Correct Answer: B

QUESTION 14

Which feature requires an administrator using an RDM to configure it with virtual compatibility mode?

- A. vMotion
- B. Virtual Machine Snapshots
- C. High Availability
- D. N-port ID Virtualization

Correct Answer: B

QUESTION 15

An administrator needs to prevent two virtual machines from running on the same host at any time. Which DRS rule should the administrator apply?

- A. vm-to-vm affinity
- B. vm-to-host affinity
- C. vm-to-vm anti-affinity
- D. vm-to-host anti-affinity

Correct Answer: C
