QUESTION 1

Which two conditions avoid requiring a temporary staging location in order to restore individual items from a Granular Recovery Technology (GRT) backup set? (Select two.)

A. The backup is on a local disk storage.

B. The backup is on local deduplication storage.

C. The backup is on tape.

D. The backup is on a third-party, Open Storage Technology device.

E. The backup is on a Cloud storage device.

Correct Answer: AB

QUESTION 2

An administrator needs to ensure that any new resources added to a server in the future will be automatically included in the backup job.

How should the administrator make the selections to ensure dynamic protection?

A. Check the box next to the server name

B. Check the job option for dynamic inclusion

C. Use the Advanced File Selection page to dynamically include all resources on the server

D. Enable the option to Discover Data to Back Up in Backup Exec Settings

Correct Answer: A

QUESTION 3

By default. Backup Exec shows the instantly recovered virtual machines present on the Backup Exec server every Friday at 2:00 PM.

How is this information displayed in a Central Administration Server Option (CASO) environment?

A. as a report in the Central Admin Server (CAS)

B. as an alert in the Central Admin Server (CAS)

C. as an alert in the server that runs the instantly recovered virtual machine

D. as a report on the Managed Backup Exec Server (MBES)

Correct Answer: A

QUESTION 4

An administrator targets a backup to a disk storage device, but the backup goes into a queued state due to insufficient disk space.

Which action should the administrator take to ensure the next backup completes successfully?

A. split the backup into more than one backup job

B. include only as much data as can fit on the disk storage device

C. target the backup to a disk storage pool that has more than one device in the pool with sufficient space

D. recreate the backup job

Correct Answer: D

QUESTION 5

A multi-server backup is failing. After checking the job log, the root cause is unclear. What is the next action an administrator should take to identify the issue?

A. perform a test run of the job

B. run SymHelp and review the failed job report

C. divide the job and back up the servers individually

D. leave the job intact and enable BEUtility

Correct Answer: C

QUESTION 6

Backup Exec allows administrators to make copies of deduplicated backup sets and transfer them to a different Backup Exec 2014 server. The transfer process is optimized, meaning only unique blocks (those not already contained in the deduplication disk storage device of the destination server) are copied.

What is the proper name of this ability?

A. optimized deduplication

B. optimized replication

C. optimized duplication

D. optimized synchronization

Correct Answer: C

QUESTION 7

Which task should an administrator complete before using Backup Exec to perform a recovery of a Unified Extensible
Firmware Interface (UEFI) partition?

A. recreate the extended partition

B. install a storage controller driver

C. recreate the utility partition

D. create a Simplified Disaster Recovery Disk

Correct Answer: C

QUESTION 8

Which two types of information are provided by Symantec Backup Exec 2014 catalogs? (Select two.)

A. storage device properties

B. searchable restore selections

C. file deduplication metadata

D. file and directory information on each backup set

E. Symantec Backup Exec server properties

Correct Answer: BD

QUESTION 9

An administrator has several expired backup sets that are still showing under the configured Disk Storage. Which two
reasons will prevent the expired backup sets from being deleted? (Select two.)

A. There are other unexpired backup sets that are dependent on them.

B. The expired backup sets need to be duplicated before they will be deleted.

C. The expired backup sets are part of a (Simplified Disaster Recovery) SDR-enabled backup.

D. The expired backup sets have to be overwritten by a new backup job.

E. The expired backup sets need to be manually deleted from the Backup Exec console.

Correct Answer: CE

QUESTION 10

What are two requirements for configuring Optimized Duplication between two or more Backup Exec servers? (Select

two.)

A. The Central Admin Server (CAS) and Managed Backup Exec Server (MBES) must be configured.

B. The NDMP option must be installed.

C. The OS must be similar on the Backup Exec servers where the Deduplication Folder needs to be shared.

D. The same Deduplication account must be used on all the Backup Exec servers.

E. The Deduplication storage on each Backup Exec server must be shared.

Correct Answer: AE

QUESTION 11

Which command must an administrator use to start the Agent for Linux daemon?

A. /etc/VRTSralua/RALUS.init start

B. /etc/init.d/VRTSBE.init start

C. /etc/init.d/RalusAqent.init start

D. /etc/init.d/VRTSralua.init start

Correct Answer: D

QUESTION 12

Which action must an administrator take to properly restore System State on a live Windows web server?

A. Restore System State in Safe mode

B. Restore System State in Directory Services Restore mode

C. Restore System State and reboot the server

D. Reboot the server before the restore of System State

E. restore System State with the option to Mark this server as the primary arbitrator

Correct Answer: C

QUESTION 13

Which diagnostic tool is designed to capture and save Backup Exec Debug Logs for the purpose of troubleshooting issues within Backup Exec?

A. discover.exe

B. VeritasQuickAssist-exe

C. Bediag.exe

D. SGMon-exe

Correct Answer: A

QUESTION 14

What are two advantages of enabling the \\'Use storage-based catalogs\\' option? (Select two.)

A. Faster cataloging is available

B. Detailed cataloging is available

C. New catalogs are created by reading each file block

D. On-media catalogs are copied to the Backup Exec server

E. The size of catalogs is reduced

Correct Answer: AD

QUESTION 15

An administrator is unable to proceed with the configuration of disk storage on a second disk on the Backup Exec server.

What could be the possible reason?

A. The disk has unformatted partitions.

B. The disk is initialized, but partitions need to be created.

C. The disk is already used as a Backup Exec disk storage.

D. The disk has a volume configured, but needs to have a drive letter assigned.

Correct Answer: D
