QUESTION 1

Which one of these functionalities relies on the guest OS file system indexing?

- A. Zeroing out dirty blocks
- B. Searching within Veeam Backup Enterprise Manager
- C. Multi-OS file-level restore
- D. Application-aware processing

Correct Answer: B

QUESTION 2

Which services are installed on every Veeam Backup Proxy server? (Choose the 2 appropriate options)

- A. Veeam Installer service
- B. Veeam Backup service
- C. Veeam Backup Catalog service
- D. Veeam Data Mover service

Correct Answer: AD

QUESTION 3

A Backup Administrator has restored a VM, on Hyper-V, using Instant VM Recovery. Which additional step should be taken to finalize the Instant VM Recovery process?

- A. Unmount the Instant Recovery VM
- B. Stop publishing
- C. Migrate to production
- D. Delete the Instant Recovery VM

Correct Answer: C

QUESTION 4

Which editions of Veeam Backup and Replication include Backup from Storage Snapshots?

- A. All Enterprise Plus Editions

- B. Enterprise Plus Edition for Hyper-V only
- C. Standard, Enterprise and Enterprise Plus Edition for Hyper-V
- D. Standard, Enterprise and Enterprise Plus Edition for VMware
- E. Enterprise Plus Edition for VMware only

Correct Answer: E

QUESTION 5

A backup administrator decided to move the Veeam Backup and Replication server and configuration database to new servers. Which configuration restore mode should be used?

- A. Migrate
- B. Planned failover
- C. Restore
- D. Failover plan

Correct Answer: A

https://helpcenter.veeam.com/docs/backup/vsphere/vbr_config_migrate.html?ver=120#step5

QUESTION 6

In Veeam Backup and Replication, encryption can be enabled at rest for following: (Choose three.)

- A. Backup job
- B. Tapes in media pools
- C. Backup Copy job
- D. Backup to tape job
- E. Replication job

Correct Answer: ABC

QUESTION 7

A scale-out backup repository is configured with data locality policy. How is an extent selected during an active full backup? (Choose two.)

- A. Always the same extent as the previous full backup
- B. An extent determined based on load control settings and free space

- C. A different extent from the previous chain to avoid single point of failure, if possible on free space
- D. It tries the same location as the previous full if using a deduplication appliance

Correct Answer: BD

QUESTION 8

When a Windows server is added to Veeam Backup and Replication using the Add Server Wizard, which components are always installed to the server? (Choose the 2 appropriate options)

- A. Veeam Installer Service
- B. Veeam Data Mover Service
- C. Veeam Backup Restful API Service
- D. Veeam Backup Shell

Correct Answer: AB

https://helpcenter.veeam.com/docs/backup/hyperv/offhost_backup_proxy.html?ver=95

QUESTION 9

Veeam Backup and Replication establishes the stabilization point during SureBackup verification according to which of the following algorithms? (Choose three.)

- A. Stabilization by heartbeat
- B. Stabilization by maximum allowed boot time
- C. Stabilization by resource allocation
- D. Stabilization by application group
- E. Stabilization by IP
- F. Stabilization by application test

Correct Answer: ABE

Reference: https://helpcenter.veeam.com/docs/backup/hyperv/surebackup_job_processing.html?ver=9

QUESTION 10

Which statement regarding various product features is true?

- A. Enterprise and Enterprise Plus allows multiple On-Demand Sandboxes to run simultaneously using the same virtual

lab.

B. Veeam Backup and Replication utilises vStorage APIs for Data Protection (VADP) when backing up VMs from Microsoft Hyper-V and VMware vSphere.

C. Enterprise Plus edition includes Premium Support SLA.

D. Quick Migration is currently available for VMware vSphere only.

E. VM copy is supported by Microsoft Hyper-V and VMware vSphere in all editions.

Correct Answer: B

QUESTION 11

If your mount server is running Windows Server 2019 and you are performing a secure restore, which statement below is true?

A. NTFS is the only format supported.

B. RefS will be skipped.

C. RefS will be processed and scanned.

D. Storage Spaces disks will be processed and scanned.

Correct Answer: A

QUESTION 12

Which of these statements regarding initial configuration are true? (select two)

A. It is possible to limit read throughput (egestion rate) on a backup repository.

B. When deploying a backup proxy it is recommended to use as many concurrent tasks as server resources and backup target can handle.

C. It is possible to limit write throughput (ingestion rate) on a backup repository.

D. VMware vCloud Director 1.5 or later are supported when adding a managed server.

E. Microsoft Hyper-V 2008 or later are supported when adding a managed server.

Correct Answer: CE

QUESTION 13

A Backup Administrator needs to create an offsite backup job and wants to store the backups on a NFS share at the remote site. Which of the following actions would result in the most optimal configuration?

A. The scenario is not supported

- B. Place on Veeam Data Mover Service at the production site
- C. Place one Veeam Data Mover Service at the remote site
- D. Mount the NFS share on a Linux server at the remote site, then add the server as a Veeam Backup Repository
- E. Mount the NFS share on a Linux server at the production site, then add the server as a Veeam Backup Repository

Correct Answer: D

QUESTION 14

A physical Linux server protected by a centrally managed Veeam agent is physically damaged. A VMware vSphere infrastructure is available, and the physical server is eligible for virtualization. Which recovery step provides the lowest possible RTO?

- A. Use Instant VM Recovery to VMware vSphere.
- B. Use Instant Disk Recovery to VMware vSphere.
- C. Use Export Disk Content as Virtual Disk to create a new VM.
- D. Use Bare Metal Restore to VMware vSphere VM.

Correct Answer: A

Explanation: According to the Veeam Agent for Linux User Guide¹, you can use the Restore volumes option to perform bare metal recovery of your computer. However, this option requires you to boot from the Veeam Recovery Media and may take some time to complete.

Another option is to use Instant VM Recovery to VMware vSphere. This option allows you to run your Linux computer directly from a backup file as a VMware VM without restoring any data. This can significantly reduce your RTO and provide

immediate access to your applications and data.

QUESTION 15

Which of the following Veeam Backup and Replication jobs can use secondary NetApp systems (SnapMirror and SnapVault) as a data source?

- A. Backup
- B. Tape backup
- C. Replication
- D. VM copy

Correct Answer: A
