QUESTION 1

Which Dell EMC SAN storage systems are compatible with the Backup from Storage Snapshots feature in Veeam Backup and Replication? (Choose two.)

- A. Dell EMC ISILON
- B. Dell EMC Data Domain
- C. Dell EMC VNX, VNXe and VNX2
- D. Dell EMC Unity

Correct Answer: CD

QUESTION 2

Which of the following Backup Proxy transport mode statements are true about Network Mode? (choose the 2 appropriate options)

- A. The Network mode is the recommended data transport mode because of the high data transfer speed over LAN, especially on 1 GbE networks
- B. To take the load off the LAN, Veeam Backup and Replication provides two alternative modes: Direct LAN Access and Virtual Appliance
- C. If VM disks are located on different storages (for example, on the SAN and local storage), Veeam Backup and Replication will fail over to use only Network Mode for all VM disks
- D. "Failover to the Network Mode if primary transport modes fail or are unavailable" option is enabled by default on the Backup Proxy when configuring the Backup Mode settings
- E. The Network mode is the only applicable mode when the backup proxy role is assigned to a physical machine and the host uses local storage

Correct Answer: BE

QUESTION 3

If the compression level and deduplication settings are changed in an existing job, previously created backup files will:

- A. Be deleted after creating a new active full backup
- B. Change according to the new settings
- C. Decompress and compress again with the new compression level
- D. Remain the same

Correct Answer: D

QUESTION 4

Which of these statements regarding Instant VM Recovery are true?

- A. Instant VM Recovery only works from newest restore point.
- B. Migration to production after Instant VM Recovery allows to change disk type.
- C. Instant VM Recovery is only available in paid editions.
- D. Instant VM Recovery allows a VM to be fully booted and all applications up and running in as little as 2 minutes
- E. After migration to production has completed the Instant VM Recovery, VM is automatically no longer published.

Correct Answer: D

QUESTION 5

Which predefined test performed on the Application Group during verification differs between SureReplica and SureBackup jobs?

- A. The application test is different for SureBackup and SureReplica
- B. There is no heartbeat test for SureReplica
- C. There is no difference
- D. There is no ping test for SureReplica

Correct Answer: C

QUESTION 6

Which of the following statements regarding encryption in Veeam Backup and Replication are true? (Choose three.)

- A. If data is encrypted at rest, it means a Backup to Tape job is storing encrypted backups on tape
- B. If data is encrypted at rest, it means a Backup Job targeting a Backup Repository has encryption enabled
- C. A Backup Job has encryption enabled and is used at the source for a Backup to tape Job. If the Tape Media Pool has encryption enabled, the data will be encrypted a second time
- D. A Backup Job has encryption enabled and is used at the source for a Backup to tape Job. If the Tape Media Pool has encryption enabled, the data will be not encrypted a second time

E. To ensure backups stored on tape are encrypted, enable encryption in the Backup to Tape job

F. To ensure backups stored on tape are encrypted, enable encryption in the Tape Media Pool

Correct Answer: ACF

QUESTION 7

A virtual machine has been permanently deleted in production but a replica is running in the Disaster Recovery data center. Which strategy would failback the virtual machine to production while saving both recovery time and network utilization?

- A. Perform failback through WAN accelerators
- B. Manually enable parallel processing for failback operation
- C. Restore this VM up-front from a backup and then perform a failback

Correct Answer: C

QUESTION 8

When is it NOT possible to use the single-host configuration for SureReplica verification?

- A. When static IP Mapping will be used to verify at least some of the VM replicas
- B. When the VM replicas being verified are on separate ESXi hosts
- C. When the Virtual Lab is created on the same ESXi host where VMs replicas are located
- D. When all the VM replicas being verified are connected to different networks

Correct Answer: B

QUESTION 9

Which statement regarding various product features are true?

- A. Veeam Explorer for Sharepoint in Standard Edition only provides limited restore support from Microsoft Hyper-V VMs.
- B. It is possible to switch a paid edition to free edition by going to View > Free functionality only from the menu.
- C. Backups from Hyper-V will never use storage snapshots - only VM snapshots.
- D. Veeam Explorer for Sharepoint in Standard Edition provides full restore support from VMware vSphere VMs.
- E. Enterprise Plus edition includes WAN acceleration which can be used for Backup Copy Jobs and Replication Jobs across the WAN.

Correct Answer: D

QUESTION 10

Which statement regarding Enterprise Manager is true?

- A. RESTful API is an optional feature.
- B. Only XML format is currently supported for RESTful API for resource representation.
- C. Users with Portal User role can access VMs from their restore scope in VMs and/or Files tab and generate reports as permitted by their settings.
- D. Restore scope can be customized if you have Enterprise Edition.
- E. Users with Restore Operator role can access VMs from their restore scope in VMs and/or Files tab, as well as reports for these VMs; they can also perform restore operations as permitted by their settings.

Correct Answer: A

QUESTION 11

In Veeam Backup and Replication, encryption works at which of the following levels: (Choose three.)

- A. Backup job
- B. Tapes in media pools
- C. Backup Copy job
- D. VM Copy job
- E. Replication job

Correct Answer: ABC

Reference https://helpcenter.veeam.com/docs/backup/vsphere/data_encryption.html?ver=95

QUESTION 12

In order to delete a backup repository from the Veeam Backup and Replication UI, you must ensure that:

- A. At least one successful Configuration Backup has been made.
- B. None of the jobs are running at the moment.
- C. None of the jobs, including the Configuration Backup job, are targeting it.
- D. All of the backup files are removed from this repository.

Correct Answer: C

QUESTION 13

Once it has been deployed and data has been collected, which Veeam product can estimate when Backup Repositories will run out of disk space and will tell you how much more disk space you will need if you continue doing backups the same way?

- A. Veeam Deployment Analyzer
- B. Veeam Backup Enterprise Manager
- C. Veeam ONE
- D. Veeam Backup and Replication

Correct Answer: C

QUESTION 14

Which statement regarding various product features is true?

- A. Native Tape Support is limited in Standard Edition. For Enterprise and Enterprise Plus editions Veeam Backup and Replication includes its own proprietary tape drivers.
- B. Backup from HP Storage Snapshots feature is only supported with Microsoft Hyper-V in Enterprise Plus edition.
- C. Standard edition only allows one On-Demand Sandbox to run at a time.
- D. Enterprise and Enterprise Plus allow multiple On-Demand Sandboxes to run simultaneously.
- E. Veeam Quick Migration is available for both Microsoft Hyper-V and VMware vSphere in all paid editions.

Correct Answer: E

QUESTION 15

Which HPE SAN storage systems are supported by the Backup from Storage Snapshot feature in Veeam Backup and Replication? (Choose the 3 appropriate options)

- A. HPE StoreVirtual
- B. HPE EVA 6000
- C. HPE MSA
- D. HPE StoreVirtual VSA
- E. HPE StoreServ

Correct Answer: ADE
